The Necessity For Nuclear Power:

The Necessity for Nuclear Power G. Greenhalgh, 2012-12-06 Energy is no longer a purely technical and commercial question it has become a political issue affecting the welfare of all mankind with far reaching implications for the preservation of world peace It is therefore vitally important for all of us that the right energy decisions be taken without delay and that the important contribution which nuclear energy can make toward the solution of the world energy problem should not be overlooked or even worse discarded It is now recognized that the only significant choices we have until at least the end of this century for the production of electric power are coal and nuclear energy and at some places hydropower Of course we have to use all other alternative energy sources available and capable of development but one should realize that by the end of the century those sources can only make a marginal contribution The shrinking world reserves and rising costs of petroleum will eventually eliminate it as a source of energy except for propulsion purposes and uses by the petro chemical industry Conservation measures in the more affluent countries and higher priority given to alternative energy technologies may only retard the growth of the demand for electricity

Why We Need Nuclear Power Michael H. Fox, 2014-03-03 Nuclear power may just be the most important solution to our search for clean sustainable energy sources Although wind and solar can contribute to our energy mix we need a reliable source to meet large scale energy demands and break our dependence on fossil fuels However most people are wary if not downright afraid of nuclear power Given nuclear disasters such as Chernobyl and Fukushima it is not difficult to see why In the wake of these events fear has clouded the public's understanding of the facts It is time to clear up those misconceptions and examine the science behind nuclear power in order to determine what role it could and should play in our future In *Why We Need Power* The Environmental Case radiation biologist Michael H Fox argues that nuclear power is essential to slowing down the impact of global warming He examines the issue from every angle relying on thirty five years of

research spent studying the biological effects of radiation Fox begins with the problem carefully laying out how our current energy uses and projections for the future will affect greenhouse gases and global warming The book then evaluates each major energy source and demonstrates the limits of renewable energy sources concluding that nuclear power is the best solution to our environmental crisis Fox then delves into nuclear power looking at the effects of radiation the potential for nuclear accidents and the best methods to dispose of nuclear waste By systematically analyzing each aspect of the nuclear issue Fox clarifies which concerns have a scientific basis and which remain unsupported His in depth exploration of the facts persuasively demonstrates that nuclear power is critical to reducing the effects of energy production on the global climate Written in an engaging and accessible style *Why We Need Nuclear Power* is an invaluable resource for both general readers and scientists interested in the facts behind nuclear energy *The Necessity for Nuclear Power* Geoffrey

Greenhalgh,1981-01-01 Nuclear Energy Now Alan M. Herbst,George W. Hopley,2007-03-07 A timely and thought provoking solution to the world s energy shortfall The dramatic increases in oil and natural gas prices the finite supply of fossil fuels and concerns over emissions and global warming are forcing us to consider alternatives In this measured and knowledgeable book energy experts Alan Herbst and George Hopley argue that the time has come for the U S to revitalize its nuclear generation assets in order to successfully meet growing domestic electricity requirements and lessen our dependence on foreign sources of energy *Nuclear Energy Now* provides an informed look at the benefits and drawbacks associated with this controversial alternative to traditional energy sources It opens with a brief overview of commercial nuclear development in the U S during the past half century and moves on to discuss what the future may hold if new initiatives supported by the Energy Policy Act of 2005 gain traction Along the way readers will find informed insights into why the need for nuclear power has become so critical and how we can safely add capacity in the coming years Exploring all of the issues related to developing America s nuclear energy capabilities safely and cost effectively *Nuclear Energy Now* is a must read for anyone concerned about our oil dependency the environment and future of the nation **Plans for Improved Safety Or Nuclear Power Plants Following the Three Mile Island Accident** Fusion Advisory Panel (U.S.),1980

G. Brookes, 2013-12-11 When we first contemplated a book on this subject we were faced with a number of options a to write it all ourselves which would have had the merit of internal consistency and continuity of style b to produce a collection of existing papers which would have given us expert views in the various sub fields of the economics of nuclear energy and would have put us in the position of knowing from the start exactly what the authors contributions would be c to commission contributions from individual specialists chapter by chapter or d some combination of these options We settled for the last we have written some of the material ourselves have obtained permission to use some existing papers that seem to us to be valuable contributions to the subject and have been fortunate in persuading a number of eminent people in their fields to produce papers especially for the book This has given us a great deal of work and taken up more time than we planned for but we believe the result justifies this time and effort It enabled us to design a structure for the book from the outset recognizing that there are several aspects to the economics of nuclear energy especially if we take a broad view of what is embraced by the word economics *Plans for Improved Safety of Nuclear Power Plants Following the Three Mile Island Accident* United States.
