Audio-Vision: Sound on Screen Michel Chion,2019-04-02 Michel Chion s landmark Audio Vision has exerted significant influence on our understanding of sound image relations since its original publication in 1994 Chion argues that sound film qualitatively produces a new form of perception Sound in audiovisual media does not merely complement images Instead the two channels together engage audio vision a special mode of perception that transforms both seeing and hearing We don t see images and hear sounds separately we audio view a trans sensory whole In this updated and expanded edition Chion considers many additional examples from recent world cinema and formulates new questions for the contemporary media environment He takes into account the evolving role of audio vision in different theatrical environments considering its significance for music videos video art commercial television and the internet as well as conventional cinema Chion explores how multitrack digital sound enables astonishing detail extending the space of the action and changing practices of scene construction He demonstrates that speech is central to film and television and shows why audio logo visual is a more accurate term than audiovisual Audio Vision shows us that sound is driving the creation of a sensory cinema This edition
