The Nature of Intelligence Gregory R. Bock,Jamie A. Goode,Kate Webb,2003-10-31 Evolutionary psychology and behavioural genetics are two successful and important fields in the study of human behaviour but practitioners in these subjects have different conceptions of the nature of human intelligence Evolutionary psychologists dispute the existence of general intelligence and emphasise the differences among species They argue that natural and sexual selection would be expected to produce intelligences that are specialised for particular domains as encountered by particular species Behavioural geneticists consider general intelligence to be the most fundamental aspect of intelligence and concentrate on the differences between individuals of the same species This exciting book features papers and discussion contributions from leading behavioural geneticists evolutionary psychologists and experts on intelligence that explore the differences and the tensions between these two approaches The nature of g or general intelligence is discussed in detail as is the issue of the heritability of intelligence The alternative approaches that emphasise domain specific intelligences are explored alongside wide ranging discussions on a broad range of issues such as the biological basis for intelligence animal models and changes in IQ scores over time

Metaphors of Mind Robert J. Sternberg, 1990-07-27 *Metaphors of Mind* seeks to help readers understand human intelligence as viewed from a variety of standpoints such as those of psychology anthropology computational science sociology and philosophy Much of the present confusion surrounding the concept of intelligence stems from our having looked at it from these different standpoints without considering how they relate to each other or how they might be combined into a unified view that goes beyond the boundaries of a particular discipline Readers of *Metaphors of Mind* will come away with a comprehensive understanding of the concept of intelligence and how ideas about it have evolved and are continuing to evolve

Human By Nature Peter Weingart, Sandra D. Mitchell, Peter J. Richerson, Sabine Maasen, 2013-06-17 Representing a wide range of disciplines biology sociology anthropology economics human ethology psychology primatology history and philosophy of science the contributors to this book recently spent a complete academic year at the Center for Interdisciplinary Research ZiF discussing a plethora of new insights in reference to human cultural evolution These scholars acted as a living experiment of interdisciplinarity in vivo The assumption of this experiment was that the scholars while working and residing at the ZiF would be united intellectually as well as socially a connection that might eventually enhance future interdisciplinary communication even after the research group had dispersed An important consensus emerged The issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural and hence to the disciplinary division of scientific labor The appropriate place for the study of human culture in this group's view is located between biology and the social sciences Explicitly avoiding biological and sociological reductionisms the group adopted a pluralistic perspective integrative pluralism that took into account both today's highly specialized and effective subdisciplinary research and the possibility of integrating the respective findings on a case by case basis Each sub group discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of several types of fruitful cooperation such as a fully integrated chapter a multidisciplinary overview or a discussion between different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human culture this book will be of interest to social scientists and biologists alike

On the Origin and Nature of Cognition Pradeep J.N. Chhaya, 2024-02-29 This monograph is an extension of the earlier monographs dealing with the application of the new modified involuted manifold model This monograph has two objectives Firstly it seeks to integrate neuronal organization with cognitive functionalities Secondly it tries to formalize a structural template of cognitive functionalities It is based on the postulate that cognitive functionalities are essentially natural phenomena and therefore amenable to formal naturalistic description Therefore it employs a topological model of spacetime proposed earlier to define a new framework wherein neuronal networks occupy the four dimensional configurations of spacetime and cognitive functionalities occupy higher dimensional configurations of spacetime Using the Darwinian conception of natural selection the monograph outlines

a model of natural selection operating at more than one level Thus natural selection at the four dimensional configurations of spacetime leads to structural agnosticism so prevalent in neuronal organization At the same time natural selection at the higher dimensional configurations of spacetime leads to natural selection of cognitive functionalities Since the proposed model offers a new computational paradigm formalized in another monograph this monograph provides a new way to formalize cognitive computations The Nature of the Soul Terrance W. Klein, 2016-03-03 This book offers a contemporary Christian explication of the word soul that uses Wittgenstein and his interpreters to suggest that human intelligence and desire cannot be mapped into the world that is described by science and metaphysics It examines the Aristotelian notion of the soul as one who acts in the world and suggests that we construct ourselves our narratives by our actions in history Drawing upon the resurrection accounts of the gospels where Jesus is presented as having been translated into the liturgy it speculates that the core of the human person his or her intelligence can be translated into other material mediums all the while maintaining personal identity Reading Aquinas according to the insights of contemporary figures in Anglo American philosophy of language Klein argues that ultimately to be a soul is to be a narrative destined for Christic incorporation into the Book of Life spoken of in Revelation
