Cyber-Savvy Students Anne Hird, 2023-07-21 As the Internet has become a common household utility more and more students are coming to school with Internet experience How do students and teachers roles and schools as institutions change when these Internet Age kids enter classrooms that are fully equipped with networked computers This book offers a unique analysis of the issues and challenges teachers face as their classrooms become fully connected to the Internet Anne Hird spent six months observing a class in a school with fully connected classrooms She presents a vivid and insightful account often reported through the students own words of how young teens use computers in and out of school how they perceive the world shaped by the Internet and how these factors shape their expectations for classroom learning She observes and reflects on the paradox which confronts teachers in this environment They are expected to guide students in learning with a cognitive tool that was not part of the teachers experience as students while students familiarity with the Internet calls into question the authority of the teacher on which the traditional teacher student relationship is based She offers a strategy for professional development which recognizes and builds on this inevitable shift in the teacher student relationship This is an absorbing thought provoking and practical book for all educators individual teachers and administrators alike concerned about the integration of computer technology into elementary and secondary school classrooms **Network Science, A Decade Later** Alan Feldman, Cliff Konold, Bob Coulter, Brian Conroy, 2000-01-12

Network Science A Decade Later the result of NSF funded research that looked at the experiences of a set of science projects which use the Internet offers an understanding of how the Internet can be used effectively by science teachers and students to support inquiry based teaching and learning The book emphasizes theoretical and critical perspectives and is intended to raise questions about the goals of education and the ways that technology helps reach those goals and ways that it cannot The theoretical perspective of inquiry based teaching and learning in which the book is grounded is consistent with the current discipline based curriculum standards and frameworks The chapters in Part I State of the Art describe the history and current practice of network science Those in Part II Looking Deeply extend the inquiry into network science by examining discourse and data in depth using both empirical data and theoretical perspectives In Part III Looking Forward the authors step back from the issues of network science to take a broader view focusing on the question How should the Internet be used and not used to support student learning The book concludes with a reminder that technology will not replace teachers Rather the power of new technologies to give students both an overwhelming access to resources experts

peers teachers texts images and data and the opportunity to pursue questions of their own design increases the need for highly skilled teachers and forward looking administrators This is a book for them and for all educators policymakers students involved in science and technology education For more information about the authors an archived discussions space a few chapters that can be downloaded as PDF files and ordering information visit teaparty.terc.edu/book **Net Learning**
