Teaching Math With Examples Michael Pershan, 2021-02-23 Some teachers think that there's little to say about teaching with examples after all everyone uses them But here are just some of the questions you might have about teaching with worked examples How do we introduce an example What do we ask students to do when studying a solution Should a solution be presented all at once or revealed step by step After we study an example what comes next Does it matter if the solution is presented as if from a fictional student a real student in class or from the teacher How do we help students move from understanding someone else's ideas towards using it on their own to solve problems How do we write a solution in a clear way that students can learn from When is a good time to offer a worked example When is it better to let students try a problem Are worked examples more useful for some mathematical content than others This book will answer all of these questions In some cases research offers answers Other questions represent gaps in the research literature and the book offers solutions arrived at through experience and trial and error and the author's own process of classroom problem solving Welcome to the world of teaching with examples

Understanding Middle School Math Arthur A. Hyde, Cheryl Heck, Susan Friedlander, Lynn Pittner, 2009 Imagine handling students state by state data on the number of gallons of soft drinks sold per person in one year Imagine using it to lead a vibrant problem solving session in which students energetically pose and answer mathematical questions Why does it say sold instead of consumed What is a soft drink Is it the same as a soda Who would collect this kind of data Why would they collect it How was gallons per person calculated What was the total amount of soda sold in our state How many 12 ounce cans is that 20 ounce bottles How many of each per person *Understanding Middle School Math* gathers 50 cool problems like this that lead to deep thinking Problems such as the Renovation Problem in which students uncover ideas about how perimeter area length and cost affect a construction project Or Chocolate Algebra where they discover linear relationships among the pocket money available to buy two differently priced chocolate candies Arthur Hyde combines the latest research and decades of classroom experience to braid language cognition and math His approach can help any student including underprepared ones with the rigors of math in middle school and beyond He has created and adapted problems that strongly connect math to the real world to students' lives and to prior knowledge Problems that scaffold content and processes and give students multiple entry points into learning Every problem has been extensively field tested and refined by classroom teachers And for each cool problem practicing middle school teachers describe how they used it to differentiate over a wide range of students and extend learning For fantastic problems your students won't soon forget and teaching solutions that are exciting substantial and transformative turn to Art
