Ritzert,2010
Green salamanders *Aneides aeneus* seasonal activity patterns have not been well documented across their range The species exhibits high site fidelity to crevices in sandstone and limestone rock outcroppings however it is unclear why they select these habitats Two sites at the Red River Gorge in Kentucky were monitored from 1 June 2006 to 30 July 2007 Each site was thoroughly searched and crevices used by green salamanders 19 crevices marked as well as the three closest unused crevices 57 crevices Crevice height off the ground width length aspect and depth were determined for all used and unused crevices During weekly visits to both study sites crevice temperature and percent relative humidity were recorded I found no significant difference between the temperature of used and unused crevices however the used crevices provided a high stable percent relative humidity approximately 92% compared to unused crevices which had a lower fluctuating humidity approximately 60 85% The physical characteristics of the used and unused crevices did not differ significantly These results indicate green salamanders apparently use a crevice because it provides a consistently moist environment **Distribution and Abundance of the Green Salamander (*Aneides Aeneus*) in Northeastern Mississippi** Bailey Watkins,2023 **Some Aspects of the Physiological Ecology of the Green Salamander, *Aneides Aeneus*** Paul Vernon Cupp,1970
The purpose of this paper is to measure some important physiological parameters involving the ecology of the green salamander *Aneides aeneus* Measurements were made of oxygen consumption and heart rate at different temperatures critical thermal maxima vital limits of desiccation and rehydration Modeling Occurrence of the Green Salamander, *Aneides Aeneus*, in the Blue Ridge Escarpment Rebecca Hale Hardman,2014 **Status and Species-habitat Relationships of the Green Salamander, *Aneides Aeneus*, at Myatt Creek in Catoosa Wildlife Management Area** Samantha B.
