Attia, 2012-12-06 During my professional career I developed a strong interest in sol gel technology and worked on both xerogel and aerogel systems My fascination with aerogels has driven me to explore their commercial potential which is currently an important component of my company's business plan Together with my co workers I have also worked on the preparation of controlled PZT and silica xerogels as well as thin film coatings of metals by the sol gel technology These experiences convinced me of the tremendous potentials of this technology A conviction that is shared by many scientists engineers and business leaders around the globe Many sol gel derived products are already articles of commerce However to expand the commercial potential of sol gel technology two challenges must be met 1 the quality of sol gel derived products must continue to meet or exceed the quality of competing products 2 the production cost of sol gel products specially aerogels must continued to decline A key to lowering the costs of sol gel products is finding inexpensive precursors *Handbook of sol-gel science and technology. 1. Sol-gel processing* Sumio Sakka, 2005 Since Dr Dislich of Germany prepared a glass lens by the sol gel method around 1970 sol gel science and

technology has continued to develop Since then this field has seen remarkable technical developments as well as a broadening of the applications of sol gel science and technology There is a growing need for a comprehensive reference that treats both the fundamentals and the applications and this is the aim of Handbook of Sol Gel Science and Technology The primary purpose of sol gel science and technology is to produce materials active and non active including optical electronic chemical sensor bio and structural materials This means that sol gel science and technology is related to all kinds of manufacturing industries Thus Volume 1 Sol Gel Processing is devoted to general aspects of processing Newly developed materials such as organic inorganic hybrids photonic crystals ferroelectric coatings photocatalysts will be covered Topics in this volume include Volume 2 Characterization of Sol Gel Materials and Products highlights the important fact that useful materials are only produced when characterization is tied to processing Furthermore characterization is essential to the understanding of nanostructured materials and sol gel technology is a most important technology in this new field Since nanomaterials display their functional property based on their nano and micro structure characterization is very important Topics found in Volume 2 include Sol gel technology is a versatile technology making it possible to produce a wide variety of materials and to provide existing substances with novel properties This technology was applied to producing novel materials for example organic inorganic hybrids which are quite difficult to make by other fabricating techniques and it was also applied to producing materials based on high temperature superconducting oxides Applications of Sol Gel Technology Volume 3 will cover applications such as Handbook of Advanced Ceramics Sumio Sakka, 2013-04-11 *Sol-Gel Optics* Lisa C.
