Solar Radiation And Daylight Models For The Energy Efficient Design Of Buildings:

Solar Radiation and Daylight Models for Energy Efficient Design of Buildings Tariq Muneer, H. Kambezidis, 1997
This book and CD Rom package provides an accessible user friendly database on daylight design data. With the boom in interest in energy efficiency and solar design it provides a valuable source for architects and engineers. It describes models which can be used to provide essential data at any place in the world. These models are included on a disk to ease the task of the architect or engineers. The authors show how these models can be applied to the energy efficient design of buildings. Electronic product for calculation of data at any point in the world. Very important data source. Looks at current green building design issues.

Solar Radiation and Daylight Models Tariq Muneer, 2007-03-30
The cost of operating a building far exceeds the cost of constructing it and yet until recently little attention was paid to the impact of solar radiation on the costs of heating, cooling and ventilation. And now that there has been a surge in interest in energy efficiency and solar design architects and designers need a practical guide to the modelling and application of solar energy data. There are many different models and techniques available for calculating the distribution of solar radiation on and in buildings and these algorithms vary considerably in scope, accuracy and complexity. This book demonstrates which of these predictive tools gives the best results in different circumstances including explaining which models can be best used in different parts of the world. The author has had over twenty five years of experience of dealing with solar energy data from four continents and has used that experience in this book to show the development not just of knowledge but also the growing sophistication of the models available to apply it.

Energy Simulation in Building Design Joseph Clarke, 2007-11-02
Since the appearance of the first edition of *Energy Simulation in Building Design* the use of computer based appraisal tools to solve energy design problems within buildings has grown rapidly. A leading figure in this field Professor Joseph Clarke has updated his book throughout to reflect these latest developments. The book now includes material on combined thermal lighting and CFD simulation, advanced glazings, indoor air quality and photovoltaic components. This thorough revision means that the book remains the key text on simulation for architects, building engineering consultants and students of building engineering and environmental design of buildings. The book's purpose is to help architects, mechanical environmental engineers and energy facility managers to understand and apply the emerging computer methods for options appraisal at the individual building, estate, city, region and national levels. This is achieved by interspersing theoretical derivations relating to simulation within an evolving description of the built environment as a complex system. The premise is that the effective application of any simulation tool requires a thorough understanding of the domain it addresses.

Daylight Design of Buildings Nick Baker, Koen Steemers, 2014-01-02
To complement the critical and objective view gleaned from the study of some sixty buildings, this design manual has been developed to provide a more synthetic approach to the principles which lie behind successful daylight design. These principles are illustrated with examples drawn from the case study buildings. The emphasis

throughout has been on practical methods to improve design rather than techniques studied for any intrinsic interest The book provides the necessary tools to assist the designer to provide well daylit interiors and shows that good daylight design is not a restriction on architectural expression but on the contrary acts as an inspiration and foundation for good architecture
