Eco-Neurobiology, and How the Environment Shapes Our Brains, Andreas M. Grabrucker, 2019-10-23. Eco neurobiology is a field of neuroscience that investigates how environmental factors impact the brain through development and aging. This book takes the reader on a journey through the most recent findings in this field, covering how non-genetic factors influence our brain and may contribute to the development of disorders as well as the everyday function of our minds. The things we eat, the stressfulness of our lives, and traumatic events all have effects on our brains that we are just beginning to understand. *Religion & Sex: Studies in the Pathology of Religious Development*, Chapman Cohen, 2015-12-17. Accepting Professor Tylor's famous minimum definition of religion as the belief in Spiritual Beings, it is safe to say that religious belief constitutes one of the largest facts in human history. No other single subject has occupied so large a share of man's conscious life; no other subject has absorbed so much of his energy. In very early stages of culture, religious belief is universal in the fullest sense of the word. It shapes all primitive institutions; it dominates life from the cradle to the grave and creates a shadow land beyond the grave from which the dead continue to influence the actions of the living. At a later stage of culture, we see a distinction being drawn between the natural and the supernatural, the secular and the spiritual, and the beginning of an antagonism that is still with us. Of all antagonisms conceived by the brain of man, this is the deepest and the most irreconcilable. **Environmental Health Perspectives**, 2004. **Annual Report**, National Institute of Environmental Health Sciences, 1978.
