

History of Sociology as a Science: Understanding Human Actions

✓ Exclusively available on IvyPanda

Sociology is a science

Sociology is a science aimed at understanding human actions. It is a science-based on interpretative analysis of society and explanation of causes of social movements. Sociology is a science because it has its concepts and uniformities, it is based on empirical processes and theories. Sociology, as a science, is focused on action (human behavior). Action is referred to as social when it is attached to the actions of individuals, their behaviors, and interactions with other social units. Action is referred to as not social when it is not oriented towards human behavior (Gerth 1946). For example, two people communicating with each other represent social action, while a person starting a car does represent mechanical action, not social. Sociology, as a science, studies actions in which participate many people, groups of people, or individuals. Scientific sociology investigates human behavior as the result of the actions of others.

From early history, sociology has been founded on methodology: observation, comparison, experiment, and historical research. The same methodology is used in such science as biology. For example, empirical research is used for suicide analysis. Only statistical rate is used to establish sociological argument on suicide. According to Max Weber, sociology is aimed at explaining the meaning: actual meaning for specific cases (average meaning for plural cases) and theoretical meaning of hypothetical cases (Gerth 1946). Sociology, similar to history, is an empirical science, while ethics and jurisprudence are dogmatic disciplines. Some critics point out that the relationship between action and reactive behavior cannot be traced empirically. Nevertheless, meaningful action cannot be found in most of the psychophysical processes as well.

Sociology is an applied discipline focused on the study of social interaction. Sociology is closely related to other sciences such as economy, psychology, biology, physiology, behavioral genetics, and even ecology. Moreover, without the contribution of sociology, many of these sciences would be deficient. Sociology does not have a uniform definition. Social stratification, for example, investigates social inequalities.
