Passive Solar Buildings J. Douglas Balcomb, 1992 Describes developments in passive solar technology that will save time energy and resources in planning for the buildings of the future This companion to Passive Cooling and Solar Building Architecture volumes 8 and 9 describes developments in passive solar technology that will save time energy and resources in planning for the buildings of the future It is filled with tips and useful research for architects and designers and includes three substantial chapters on general modeling Passive solar heating works Properly designed and constructed it is cost effective practical comfortable and aesthetic Balcomb s introductory remarks set the tone for the rest of the contributions which describe the considerable record of achievements in passive solar heating Balcomb summarizes and evaluates the era between 1976 and 1983 when most of the major developments took place and highlights the design features that have contributed to effective buildings Three chapters cover modeling passive systems applicable to both heating and cooling and six chapters focus on the application of passive solar heating with emphasis on components analytical results for specific systems test modules subsystem integration into buildings performance monitoring and results and design tools J Douglas Balcomb is a Principal Engineer with the Solar Energy Research Institute

Thermal Analysis and Design of Passive Solar Buildings AK Athienitis, 2013-10-18 Passive solar design techniques are becoming increasingly important in building design This design reference book takes the building engineer or physicist step by step through the thermal analysis and design of passive solar buildings In particular it emphasises two important topics the maximum utilization of available solar energy and thermal storage and the sizing of an appropriate auxiliary heating cooling system in conjunction with good thermal control Thermal Analysis and Design of Passive Solar Buildings is an important contribution towards the optimization of buildings as systems that act as natural filters between the indoor and outdoor environments while maximizing the utilization of solar energy As such it will be an essential source of information to engineers architects HVAC engineers and building physicists

Solar Technologies for Buildings Ursula Eicker, 2003-07-18 A complete overview of solar technologies relevant to the built environment including solar thermal energy for heating and cooling passive solar energy for daylighting and heating supply and photovoltaics for electricity production Provides practical examples and calculations to enable component and system simulation e g Calculation of U values I V curve parameters and radiance distribution modelling Discusses the new trends in thermal energy use including the architectural integration of collector systems integrated ventilation photovoltaics facades and solar powered absorption cooling systems Coverage of cutting edge applications such as active and passive cooling techniques and results from ongoing research projects

Solar Buildings Giulia Falconi, 1997 Today throughout the architecture and town planning world systems based on renewable energies are being studied experimented with and created This is not merely a response to an energy crisis that has involved our whole planet but it reflects a renewed sense of ethics one that leads us to want to act with economy in harmony with the environment Hence the

desire to adopt essential solutions that are devoid of waste that behave like biological beings establishing relations not of conflict with the environment but rather of friendship with it This attitude connects back up with millennia old traditions that since the ancient Egyptian civilization enjoyed extraordinary developments in the Roman Islamic and Renaissance civilizations but also in the humbler settlements of a recent past And of course the methods used were solar for the sun is obviously the main source of renewable energy on which the fundamental natural goods depend light warmth movements in the atmosphere the climate The most qualified architects throughout the world are working on these themes which they are bringing up to date and extending using new technologies concepts and methods a great tradition that for too long had been forgotten Introduction by Cettina Gallo Manfredi Nicoletti Peter C von Seidlein Dionysis Zivas Written in English with introductions also in Italian German and Greek

Solar Buildings and Neighborhoods Caroline Hachem-Vermette, 2020-05-30 This book presents the main principles for designing buildings and neighborhoods with increased potential to capture and utilize solar energy It discusses practical issues in the design of the built environment and their impact on energy performance and a range of design considerations from building components e g the building envelope to urban planning issues e g density and street layouts In addition to design guidelines on how to increase buildings potential to capture solar energy the book provides creative tips to increase the aesthetic value of solar technology integration in buildings Helping readers plan energy efficient buildings with innovative building envelope technologies and to understand the impact of early stage design considerations on the energy performance of buildings and communities the book offers a valuable source of information for building professionals including architects engineers and urban planners It can also serve as a reference guide for academics and students of energy efficiency in buildings and urban planning NBS Building Science Series, 1974
