Nora Jacobson

The Patient And The Plastic Surgeon:

The Patient and the Plastic Surgeon Robert M. Goldwyn, 1991 Cleavage Nora Jacobson, 2000 Women's breasts have been idealized as symbols of femininity and motherhood. They have held great social and psychological significance as objects drawing intrusive gazes and as images of self-worth to be measured against an idealized form. It is no wonder then that a technology emerged to alter and enhance their appearance. Nora Jacobson traces the hundred-year history of one such technology: breast implants. Organized both chronologically and thematically, this book examines the history of breast implant technology from 1895 to 1990, including the controversies that erupted in the early 1990s over the safety of the devices and the Food and Drug Administration's regulation of their use. Jacobson examines such topics as politics and bias in medical practice and the role of bureaucracies, corporations, and governments in establishing policy and regulating implant technology.

Breast Cancer Kelly K. Hunt, 2001 BREAST CANCER is the first volume of The MD Anderson Cancer Care Series, featuring the best standard treatment protocols from the experts at MD Anderson Cancer Center. As more is learned about the relative roles of different treatment modalities, a pattern of practice is emerging where several different disciplines are involved early in the diagnostic and treatment phases of breast cancer. The impact of new and established diagnostic approaches that utilize radiodiagnosis and pathology in combination are requiring that a full range of special expertise from these disciplines be made available to patients. This clinical guidebook is an essential resource for the busy practitioner, allowing for quick authoritative access to the latest and best in multimodality therapies. Topics covered in this volume include screening for early detection of breast cancer, hereditary breast/ovarian cancer, genetic syndromes, diagnostic radiology, ultrasonography, pathology, surgical options, radiation therapy for early and advanced breast disease, tumor markers, standard and high-dose chemotherapy, hormonal therapy, reconstructive surgery, post-treatment rehabilitation, and symptom management and quality of life. Over 125 photographs and line drawings illustrate the principles discussed in the text. This handbook will become an important guide and resource for community oncologists as well as general surgeons, internists, and family practitioners.
