Sen, Kamal K. Bardhan, Bikas K. Chakrabarti, 2009-03-20 This lecture notes in physics volume mainly focuses on the semi classical and quantum aspects of percolation and breakdown in disordered composite or granular systems The main reason for this undertaking has been the fact that of late there have been a lot of theoretical work on quantum percolation but there is not even a single published review on the topic and of course no book Also there are many theoretical and experimental studies on the nonlinear current voltage characteristics both away from as well as one approaches an electrical breakdown in composite materials Some of the results are quite intriguing and may broadly be explained utilising a semi classical if not fully quantum mechanical tunnelling between micron or nano sized metallic islands dispersed separated by thin insulating layers or in other words between the dangling ends of small percolation clusters There have also been several theoretical studies of Zener breakdown in Mott or Anderson insulators Again there is no review available connecting them in any coherent fashion A compendium volume connecting these experimental and theoretical studies should be unique and very timely and hence this volume The book is organised as follows For completeness we have started with a short and concise introduction on classical percolation In the first chapter D Stauffer reviews the scaling theory of classical percolation emphasizing biased diffusion without any quantum effects The next chapter by A K **50 Visions of Mathematics** Sam
