The Panama Paradox:

The Panama Paradox Michael Wolfe, 1986-11-01 **Paradox in the Panama Canal Zone** Charles Frederick Reid, 1935

The Cradle of Humanity Mark Maslin, 2017 One of the fundamental questions of our existence is why we are so smart. There are lots of drawbacks to having a large brain including the huge food intake needed to keep the organ running the frequency with which it goes wrong and our very high infant and mother mortality rates compared with other mammals due to the difficulty of giving birth to offspring with very large heads. So why did evolution favour the brainy ape? This question has been widely debated among biological anthropologists and in recent years Maslin and his colleagues have pioneered a new theory that might just be the answer. Looking back to a crucial period some 1.9 million years ago when brain capacity increased by as much as 80% *The Cradle of Humanity* explores the implications of two adaptive responses by our hominin ancestors to rapid climatic changes: big jaws and big brains. Maslin argues that the impact of changing landscapes and fluctuating climates that led to the appearance of intermittent freshwater lakes in East Africa may have played a key role in human evolution. Alongside the physical evidence of fossils and tools he considers social theories of why a large complex brain would have provided a major advantage when trying to survive in the constantly changing East African landscape.

The South Atlantic Gerold Wefer, Wolfgang H. Berger, Gerold Siedler, David J. Webb, 2012-12-06 The book presents results of recent projects in oceanography and marine geosciences e.g. WOCE, JGOFS, PAGES ODP regarding present and past circulation in the South Atlantic. The objective of the book is to integrate results from both oceanographic and geological studies. As the connecting link between the Antarctic and the North Atlantic, the South Atlantic plays a crucial role with regard to the heat budget of the North Atlantic and to the biogeochemical budget of the global ocean. New results from studies of meridional water mass and heat transports are presented. The central theme of geological investigations is the reconstruction of current and productivity systems in the South Atlantic during the late Quaternary. The Power of Paradox Deborah Schroeder-Saulnier, 2014-03-24 We're so often faced with apparent paradoxes: continuity and change, conservatism and progressiveness, predictability and chaos. In business, inherent tensions are mistakenly viewed as problems to be resolved once the correct answer is found. But when we consider only one direction, either A or B, we only see part of the picture. The strongest and most innovative solutions are frequently realized not through either/or decisionmaking but by pursuing two contrasting options at the same time. Taking readers through the same steps she's used to help Fortune 500 companies such as Scottrade, Georgia Pacific and Boeing, Deborah Schroeder-Saulnier reveals a dynamic critical thinking process anyone can use to define the strategic tensions within his or her organization, identify the potential of seemingly conflicting options and develop action steps to maximize the benefits of each. Complete with examples of companies that achieved a competitive advantage with this breakthrough strategy, *The Power of Paradox* will help you face chronic challenges with confidence and uncover unexpected and infinitely better solutions.
