**Treating Suicidal Behavior** M. David Rudd,Thomas E. Joiner,M. Hasan Rajab,2004-07-26 This manual provides an empirically supported approach to treating suicidality that is specifically tailored to today's managed care environment. Structured yet flexible, the model is fully compatible with current best practice standards. The authors establish the empirical and theoretical foundations for time-limited treatment and describe the specific tasks involved in assessment and intervention. The book then details effective ways to conduct a rapid case conceptualization and outpatient risk assessment, determine and implement individualized treatment targets, and monitor treatment outcomes. Outlined are clear-cut intervention techniques that focus on symptom management, restructuring the patient's suicidal belief system, and building such key skills as interpersonal assertiveness, distress tolerance, and problem solving. Other topics covered include the role of the therapeutic relationship, applications to group work, and longer-term therapy, the use of medications, patient selection, and termination of treatment. Illustrated with helpful clinical examples, the book features numerous tables, figures, and sample handouts, some of which may be reproduced for professional use. **The American Psychiatric Association**

Scholars around the globe have puzzled over what makes a person suicidal and what is in the minds of those individuals who die by suicide. Most often, the focus is not on the motives for suicide nor on the phenomenology of this act, but on what is found from small cohorts of suicidal individuals. This book offers a tentative synthesis of a complex phenomenon and sheds some light on models of suicide that are less frequently encountered in the literature. Written by international experts, it makes a valuable contribution to the field of suicidology that appeals to a wide readership, from mental health professionals to researchers in suicidology and students.
