Sulfite Science And Technology:

Sulfite Science and Technology Michael J. Kocurek, Otto V. Ingruber, A. Wong, 1985 **Pulp and Paper**
Manufacture: Sulfite science & technology Michael J. Kocurek, Frederick Stevens, 1983 Handbook of Food Science, Technology, and Engineering Yiu H. Hui, 2006 Pulp Production and Processing Valentin I. Popa, 2020-07-06 This book presents the aspects of cellulose obtained in correlation with its integration into the new concept of biorefining The authors detail the individual steps of pulp manufacture as well as properties and fiber characterization techniques for paper cellulose derivatives and processing by products This book is of interest to scientists and advanced students working in the fields of renewable resources and biorefining **Biomass Fractionation Technologies for a Lignocellulosic Feedstock Based Biorefinery** S.I. Mussatto, 2016-02-18 Biomass Fractionation Technologies for a Lignocellulosic Feedstock based Biorefinery reviews the extensive research and tremendous scientific and technological developments that have occurred in the area of biorefining including industrial processes and product development using green technologies often referred as white biotechnology As there is a huge need for new design concepts for modern biorefineries as an alternative and amendment to industrial crude oil and gas refineries this book presents the most important topics related to biomass fractionation including advances challenges and perspectives all with references to current literature for further study Presented in 26 chapters by international field specialists each chapter consists of review text that comprises the most recent advances challenges and perspectives for each fractionation technique The book is an indispensable reference for all professionals students and workers involved in biomass biorefinery assisting them in establishing efficient and economically viable process technologies for biomass fractionation Provides information on the most advanced and innovative pretreatment processes and technologies for biomass Reviews numerous valuable products from lignocellulose Discusses integration of processes for complete biomass conversion with minimum waste generation Identifies the research gaps in scale up Presents an indispensable reference for all professionals students and workers involved in biomass biorefinery assisting them in establishing efficient and economically viable process technologies for biomass fractionation Regenerated Cellulose Fibres C Woodings, 2001-04-30 This is a comprehensive work by industrial and academic specialists proving up to date information on the chemistry physics process technology applications and markets for man made cellulosic fibres It covers the properties and applications of viscose rayon cuprammonium rayon and the new solvent spun fibres as well as considering their relationships with the natural celluloses such as cotton and the synthetic polymer fibres such as polyester This overview of the only truly naturally recyclable fibres and the latest manufacturing techniques that are being developed to produce them will be of interest to professionals in textile production research and development manufacturing chemists and textile technologists The nonwovens and paper industries that use cellulose as a basic ingredient of their products will also find it valuable as will medical textiles producers and geotextiles engineers Biomass Utilization: Conversion

Strategies Nhuan Phu Nghiem, Tae Hyun Kim, Chang Geun Yoo, 2022-08-20 This book focuses on the technologies developed for the conversion of all three biomass components i.e. cellulose, hemicellulose and lignin and their constituents to fuels and high value products. Both biochemical and thermochemical approaches are reviewed. Additionally, the developed technologies are described in detail and their potential applications as well as their commercial status are discussed. The early attempts to produce fuel ethanol from lignocellulosic biomass feedstock focused solely on the biological conversion of cellulose because the only organism that had been used successfully for commercial production of ethanol i.e. *Saccharomyces cerevisiae* could only ferment glucose which was obtained from the hydrolysis of cellulose. Hemicellulose and lignin were considered as wastes in these processes and were normally removed in pretreatment processes to enhance enzymatic hydrolysis of the remaining cellulose. However, this approach was not economically feasible and as a result, the biorefinery concept was developed. In a biorefinery, in addition to ethanol, various higher value products are produced from hemicellulose and lignin which were previously not considered. Consequently, technologies were developed for the fractionation of biomass and conversion of hemicellulose and lignin to fuels and high value products to improve the economic feasibility. Written and edited by a team of investigators with many years of experience in biomass processing research and development, this book is an informative resource for postgraduate students and researchers interested in biorefinery and biofuel technologies both in academia and commercial laboratories. **Journal of Pulp and Paper Science**, 1988 **A Sustainable Bioeconomy** Mika

Sillanpää, Chaker Ncibi, 2017-04-13 An authoritative and comprehensive volume of knowledge and green technologies wholly focused on the future of the bioeconomy. The authors present data, show opportunities, discuss R & D findings, analyze strategies, assess the wider economic impact, showcase achievements, criticize policies and propose solutions for the green revolution in biofuels, biochemicals and biomaterials production and power generation. A fascinating range of case studies from the US, China and many European countries are used to inform readers about the impact of this field on society and how various technologies are currently being implemented. Additionally, the role of industry on this green industrial revolution is outlined with contributions from several major companies such as DuPont, US, UPM, Kymmene Oy, Finland, Anhui BBKA Biochemical Co, China.

Chemistry for Biomass Utilization Raimo Alén, 2023-12-04 Much interest has been directed to the versatile possibilities of using lignocellulosic biomass resources i.e. renewable raw materials for the full scale production of various chemicals and other bioproducts together with solid, liquid and gaseous fuels. Introduces modern aspects and various technologies of lignocellulosic biomass conversion for producing chemicals, biofuels and other products in a reader friendly way. Starting with fundamentals of biorefinery, the author further describes chemical, biochemical and thermal conversion approaches. In addition, the properties and biorefining principles of non-wood biomass feedstock. **Antimicrobials in Food**

P. Michael Davidson, T. Matthew Taylor, Jairus R. D. David, 2020-11-10 Fifteen years have passed since the 3rd edition of *Antimicrobials in Food* was published. It was arguably considered the must-have reference for those needing information on

chemical antimicrobials used in foods In the years since the last edition the food industry has undergone radical transformations because of changes on several fronts Reported consumer demands for the use of natural and clean label antimicrobials have increased significantly The discovery of new foodborne pathogen niches and potentially hazardous foods along with a critical need to reduce food spoilage waste has increased the need for suitable antimicrobial compounds or systems Novel natural antimicrobials continue to be discovered and new research has been carried out on traditional compounds These and other related issues led the editors to develop the 4th edition of Antimicrobials in Food In the 4th edition the editors have compiled contemporary topics with information synthesized from internationally recognized authorities in their fields In addition to updated information new chapters have been added in this latest release with content on the use of bacteriophages lauric arginate ester and various systems for antimicrobial encapsulation and delivery Comprehensive revisions of landmark chapters in previous editions including naturally occurring antimicrobials from both animal and plant sources methods for determining antimicrobial activity new approaches to multifactorial food preservation or hurdle technology and mechanisms of action resistance and stress adaptation are included Complementing these topics is new information on quantifying the capability of clean antimicrobials for food preservation when compared to traditional food preservatives and industry considerations when antimicrobials are evaluated for use in food manufacture Features Covers all food antimicrobials natural and synthetic with the latest research on each type Contains 5 000 references on every conceivable food antimicrobial Guides in the selection of appropriate additives for specific food products Includes innovations in antimicrobial delivery technologies and the use of multifactorial food preservation with antimicrobials
