Sulphur In Biology Studies In Biology 101:

Sulphur in Plants Y.P. Abrol,A. Ahmad,2013-06-29 Sulphur S plays a pivotal role in various plant growth and development processes being a constituent of sulphur containing amino acids cysteine and methionine and other metabolites viz glutathione and phytochelatins co factor of enzymes which contribute to stress repair and amelioration of heavy metal toxicity Besides a number of S containing components are biologically active and thus a source for use as medicinal value The basic global issue before the agricultural scientist and world community is to evolve cultivars and develop methodologies for efficient use of inputs to enhance agricultural productivity This is particularly true of the developing countries which are going to see maximum rise in population with changing food demands and declining availability of land Amongst the inputs nutrients play a crucial role The major requirement is for N P and K followed by several micro nutrients In this context reports of world wide S deficiency in the agricultural systems are relevant The reasons are many Broadly speaking reduction inS emission use of S free N P and K fertilizers and higher biomass production contributed the maximum Despite the need for sulphur as an essential plant nutrient and the substantial returns expected from its use very little attention has been given to fill the gap between supply and demand of S Air Quality Criteria for Particulate Matter National Center for

Goldman,P.M. Steinert,2013-06-29 Research activity on intermediate filaments IF has increased dramatically over the past decade For the most part this surge of interest is due to their identification as ubiquitous constituents of the cytoskeleton and karyoskeleton nuclear matrix of eukaryotic cells and the fact that we know very little regarding their functions In sharp contrast to the other major cytoskeletal systems microfilaments and microtubules IF exhibit a high degree of heterogeneity with regard to their protein subunit composition Indeed one can only marvel at the number of different IF polypeptides their associated proteins IFAP and consequently the number of genes involved in encoding the multiple constituents of the various IF networks found in different cell types The chapters in this book demonstrate how various experimental approaches involving cellular molecular biochemical and immunological methods have been utilized to generate information regarding the structure and function of IF To this end we have gathered together chapters from experts in the major fields of IF research In each chapter the authors have combined reviews of the available scientific literature with their own ideas on current and future directions for IF research The chapters have been divided into five major sections which are concerned with the subcellular organization of IF the molecular structure of IF the differential expression of IF genes descriptions of associated proteins involved in the intracellular organization of IF and finally an analysis of the changes seen in IF in pathological conditions Library of Congress Catalogs Library of Congress,1980 **Monographic Series** Library of Congress,1979

The Hair Fibre: Proteins, Structure and Development Jeffrey E. Plowman, Duane P. Harland, Santanu Deb-Choudhury, 2018-05-24 Hair is a sophisticated bio based material whether it is on a human head or part of a mammalian coat In particular the role of the proteins in the follicle integral to hair development are not well understood This new book seeks to integrate the latest research in proteomic and morphological studies into a coherent description of fibre development from the follicle to its final mature keratinized form To achieve this the book has been divided into three sections The first describes the keratins their associated proteins and how they assemble into intermediate filaments in the fibre The second covers the latest information on the morphological changes that occur from the base of the follicle through the keratinization process to the mature fibre and the role that proteins play in this The final section delves into fundamental fibre properties such as crosslinking thermal and oxidative modifications and how these affect the mature fibre The editors of this book are internationally recognised for their work in the area of mammalian hair Jeffrey Plowman for his knowledge of the proteomics of the fibre Santanu Deb Choudhury for his work in the area of crosslinking in the fibre and Duane Harland for his understanding of the morphological development of the fibre Together they have collected material from other international experts Leopold Eckhart and Florian Ehrlich for their knowledge of the evolution of keratins Dong Dong Wu and David Irwin for their studies on keratin associated protein evolution David Parry and Bruce Fraser for their work on keratin and keratin associated protein structure and assembly John McKinnon for his studies on macrofibril formation Crisan Popescu for the thermodynamics of keratins and Jolon Dyer for his oxidative modification studies of keratins This book provides a comprehensive introduction and useful reference guide to hair biology and will be of interest to both scientists and technologists
