Augustin Gattinger's 1901 *Flora of Tennessee* and a *Philosophy of Botany* has a work of this scope been attempted. The team of editors, authors, and contributors not only provide keys for identifying the major groups, families, genera, species, and lesser taxa known to be native or naturalized within the state, with supporting information about distribution, frequency of occurrence, conservation status, and more, but they also offer a plethora of descriptive information about the state's physical environment and vegetation, along with a summary of its rich botanical history dating back to the earliest Native American inhabitants. Other features of the book include a comprehensive glossary of botanical terms and an array of line drawings that illustrate the identifying characteristics of vascular plants, from leaf shape and surface features to floral morphology and fruit types. Finally, the book's extensive keys are indexed by families, scientific names, and common names. The result is a user-friendly work that researchers, students, environmentalists, foresters, conservationists, and indeed anyone interested in Tennessee and its botanical legacy and resources will value for years to come. **A Summer Frost** Elizabeth Walker, 1986

Catastrophes it seems are becoming more frequent in the twenty-first century. According to UN statistics, every year approximately two hundred million people are directly affected by natural disasters—seven times the number of people who are affected by war. Discussions about global warming and fatal disasters such as Katrina and the Tsunami of 2004 have heightened our awareness of natural disasters and of their impact on both local and global communities. Hollywood has also produced numerous disaster movies in recent years, some of which have become blockbusters. This volume demonstrates that natural catastrophes—earthquakes, hurricanes, floods, etc.—have exercised a vast impact on humans throughout history and in almost every part of the world. It argues that human attitudes toward catastrophes have changed over time. Surprisingly, this has not necessarily led to a reduction of exposure or risk. The organization of the book resembles a journey around the globe—from Europe to North Africa, the Middle East, and Asia, and from the Pacific through South America and Mexico to the United States. While natural disasters appear everywhere on the globe, different cultures, societies, and nations have adopted specific styles for coping with disaster. Indeed, how humans deal with catastrophes depends largely on social and cultural patterns, values, religious belief systems, political institutions, and economic structures. The roles that catastrophes play in society and the meanings they are given vary from one region to the next; they differ—and this is one of the principal arguments of this book—from one cultural, political, and geographic space to

the next The essays collected here help us to understand not only how people in different times throughout history have learned to cope with disaster but also how humans in different parts of the world have developed specific cultural social and technological strategies for doing so
