It's About Time Alex Duthie, 2012-02-29 *It's About Time* presents an introduction to theoretical physics as well as challenges to some of the concepts put forward by theoretical physicists of our time. These scientists have presented such concepts in countless public lectures, highlights of which are compiled here along with a variety of historical data such as the history of earth time. Also included are short biographies of physicists who have contributed significantly to our knowledge base. To help foster understanding of the related astronomical matters, *It's About Time* includes technical information relating to Newton and Kepler's laws. Technical discussions are appended to the end of each relevant chapter. Furthermore, it offers a credible and significant challenge to Einstein's theories and to the current thinking on time dilation. Finally, the study outlines some procedural guidelines for young physicists and suggests how academic institutions can become custodians of a central depository of reference data, facilitating future physicists into more efficient and fruitful endeavors. This study offers no challenge to mathematics, which is a pure and exact science. When a physicist is able to have the mathematics represent natural phenomena, then mathematics becomes a necessary tool for our simplified understanding of nature. Eventually, all of nature will be reduced to mathematical terms. The challenge presented here is to theoretical mathematics with no proven relationship to natural phenomena.

Sun Records Martin Hawkins, 1987 *Australian Languages* Claire Bower, Harold James Koch, 2004-01-01 This book addresses controversial issues in the application of the comparative method to the languages of Australia, which have recently come to international prominence. Are these languages different in ways that challenge the fundamental assumptions of historical linguistics? Can subgrouping be successfully undertaken using the Comparative Method? Is the genetic construct of a far-flung Pama-Nyungan language family supportable by classic methods of reconstruction? Contrary to increasingly established views of the Australian scene, this book makes a major contribution to the demonstration that traditional methods can indeed be applied to these languages. These studies, introduced by chapters on subgrouping methodology and the history of Australian linguistic classification, rigorously apply the comparative method to establishing subgroups among Australian languages and justifying the phonology of Proto-Pama-Nyungan. Individual chapters can profitably be read either for their contribution to Australian linguistic prehistory or as case studies in the application of the comparative method.
