Ramírez-Weaver, 2017-02-24 In A Saving Science Eric Ram rez Weaver explores the significance of early medieval astronomy in the Frankish empire using as his lens an astronomical masterpiece the deluxe manuscript of the Handbook of 809 painted in roughly 830 for Bishop Drogo of Metz one of Charlemagne's sons Created in an age in which careful study of the heavens served a liturgical purpose to reckon Christian feast days and seasons accurately and thus reflect a heavenly order the diagrams of celestial bodies in the Handbook of 809 are extraordinary signifiers of the intersection of Christian art and classical astronomy Ram rez Weaver shows how by studying this lavishly painted and carefully executed manuscript we gain a unique understanding of early

medieval astronomy and its cultural significance In a time when the Frankish church sought to renew society through education the Handbook of 809 presented a model in which study aided the spiritual reform of the cleric s soul and by extension enabled the spiritual care of his community An exciting new interpretation of Frankish painting A Saving Science shows that constellations in books such as Drogo s were not simple copies for posterity s sake but functional tools in the service of the rejuvenation of a creative Carolingian culture **Code of Federal Regulations**, 1997 Special edition of the Federal Register containing a codification of documents of general applicability and future effect with ancillaries
