Social Production Of Technical Work:

The Social Production of Technical Work Peter Whalley, 1986-01-01 Engineers appear in recent social science as central though somewhat elusive figures They play a particularly critical role in the various attempts to understand the impact of science based industry on the class structure of advanced capitalist societies In this book Peter Whalley brings these engineers into sharper focus He argues that engineers should not be seen as members of a glamorous new class of professionalized knowledge workers nor as a radicalized new working class or partially de skilled technical proletariat Rather they should be viewed as trusted employees selected socialized trained and rewarded to perform the discretionary tasks necessarily delegated by employers in the complex organizations of advanced capitalism The book draws extensively on observations and interviews to compare engineers work and understanding in the high and low tech settings of two British companies Computergraph an advanced electronics firm and Metalco a traditional British engineering giant Whalley compares the technical work structure of Britain with those of France and the United States He argues that the impact of technological change on class structure is critically mediated by nationally specific modes of organizing technical work and producing trusted workers The book goes beyond cultural explanations of these national variations to examine how they are created and reproduced in the organization of work and the structuring of occupations Research in Social Stratification
