Nicholas Gabriel Arons, 2004-10-01 When droughts hit northeastern Brazil thousands of rural workers are forced to abandon their homes for the cities in search of work The double impact of drought and corruption with politicians taking advantage of drought to buy votes and pilfer government accounts contributes to an endless cycle of human suffering In order to understand the impact of drought and the phenomenon of drought politics Nicholas Gabriel Arons goes beyond traditional social science scholarship to sources such as novels poetry popular art and oral history For many people in the region these artistic renditions of life are ironically a better reflection of reality than political rhetoric government archives and newspaper accounts even though they are infused with myth or hyperbole Drawing on interviews with artists and poets and on his own experiences in the Brazilian Northeast Arons has written a poignant account of how drought has impacted the region's culture He intertwines ecological social and political issues with the words of some of Brazil's most prominent authors and folk poets to show how themes surrounding drought hunger migration endurance nostalgia for the land have become deeply embedded in Nordeste identity Through this tapestry of sources Arons shows that what is often thought of as a natural phenomenon is actually the result of centuries of social inequality political corruption and unsustainable land use *Waiting for Rain* dramatically depicts a region still suffering from austere social and political realities where drought even during rainy seasons is ubiquitous in the hearts and minds of its residents A book of hope and resistance myth and reality and suffering and salvation it is also a personal narrative of self discovery tracing a young man's struggle to understand how human tragedy on a grand scale can exist alongside natural beauty *American Sugar Industry*, 1913 **Rain Forest**

Laurie Agopian, Illene Miller, 1995 In this study of rain forest students will learn about the interdependence of the plant and animal life that is so unique to this environment *Pollination Ecology and the Rain Forest* David Roubik, Shoko Sakai, Abg Abdul Hamid, 2006-03-30 Rain Forest Biology and the Canopy System Sarawak 1992 2002 The rain forest takes an immense breath and then exhales once every four or five years as a major global weather pattern plays out usually heralded by El Niño or Southern Oscillation While this powerful natural cycle has occurred for many millennia it is during the past decade that both the climate of Earth and the people living on it have had an increasing influence on the weather pattern itself with many biological consequences In Southeast Asia as also in most of the Neotropics El Niño accompanies one of the most exuberant pourings of nature's diversity After several years of little activity the incredibly diverse rain forests suddenly burst into flower a phenomenon referred to as General Flowering in Asia Plant populations are rejuvenated and animals are fed but the process involves a delicate and complex balance When the canopy access system was under construction at Lambir Hills National Park in the early 1990s it made use of an underlying technology that was already in place bridges For centuries bridges have spanned the natural chasms over rivers This existing network of bridges and the people who built and use them produced the technology we needed to gain access to the canopy Bridge builders were our natural allies in the quest for biological knowledge of the high canopy *Sugar and Sweetener Report*, 1979
