Sugar Industry J. Maurice Paturau, 1969 Production of Ethanol from Sugarcane in Brazil Márcia Azanha Ferraz Dias de Moraes, David Zilberman, 2014-03-31 The success of Brazil in the large scale production and use of fuel ethanol has been widely discussed and analyzed by other countries interested in adopting policies designed to encourage the use of biofuels. Within this context certain questions arise: Could the Brazilian experience be replicated in other countries? What were the conditions that enabled the creation of the Brazilian Proalcool National Ethanol Program and what lessons can be learned? To examine these issues it is important to understand the functioning of the key interconnected markets: those for sugarcane, sugar and ethanol, which from their inception were the objects of extensive government intervention until 1999. Two main conditions enabled the creation of Proalcool: robust production of sugarcane and sugar tightly regulated by the government, which applied the numerous regulations then in place; and the military regime that was in place at the time, whose decision making and enforcement powers were quite broad, facilitating the carrying out of the necessary actions as well as making it easier to coordinate the activities of the various stakeholders and sectors involved. This book increases understanding of the functioning of the sugarcane supply chain in Brazil not only during the phase of government intervention but also in recent years in the free market environment. The lessons, positive and negative, gleaned from the Brazilian experience can contribute to reflection on and the development of alternative modalities of biofuel production in other countries, making the book of interest to scholars and policy makers concerned with biofuel and renewable resources as well as economic development.

Production of Sugarcane Gururaj Hunsigi, 2012-12-06 Presented here is a comprehensive account of both theoretical and practical aspects of sugarcane production. The first of two parts of the book deals with origin, distribution, soil and climatic requirements, seed bed preparation, cultural and nutrient requirements, fertilization, irrigation, ratooning, weeds, pests, diseases, ripening and harvest. In the second part, energy and fibre, cane development and manufacturing techniques of sugar and by products are treated in detail. This book will serve as a vademecum for cane growers, sugar and sugarcane technologists, students and teachers.
