Magic Or Medicine? Robert Buckman, 1995-05 a fascinating informative complete and objective picture including descriptions history comparisons and case studies about traditional and complementary medicine Highly recommended for health professionals faculty and students at all levels Choice Modern medicine is one of the most successful branches of science with a distinguished history of conquering many of the twentieth century's deadliest diseases Yet today people are turning in record numbers to alternative therapies that have little or no scientific basis What accounts for this flight from reason in the face of hard evidence that medical doctors do a better job of treating disease and alleviating suffering than their alternative counterparts In *Magic or Medicine* Dr Robert Buckman and Karl Sabbagh offer a response to this question by critically evaluating both alternative and conventional medical approaches to patient care The authors argue that healing has always been partly the science of clinical treatment medicine and partly an art magic Medicine may make the patient get well but often it is magic that makes the patient feel well With all the pressures under which they work modern medical doctors often neglect the magic in their dealings with patients Alternative therapists however frequently offer nothing but magic Buckman and Sabbagh look closely at the claims made for both medical science and alternative treatments and discover a gap between the promises and the reality of each approach *Magic or Medicine* is vital reading for anyone concerned about the effective delivery of healthcare Robert Buckman Ph D FRCP is a cancer specialist and assistant professor at the Toronto Bayview Regional Cancer Centre at Sunnybrook Hospital University of Toronto He is also the current president of the Humanist Association of Canada Among his previous books are *How to Break Bad News* and *I Don't Know What to Say How to Help and Support Someone Who Is Dying* Karl Sabbagh M A is a television producer whose credits include *The Body in Question* with Dr Jonathan Miller He is also the author of numerous books on scientific and medical topics including *The Living Body A Guide to How the Body Works*

to criminal justice are moving beyond observation to investigate exactly how expectations work and when they don't. In *Mind Over Mind* journalist Chris Berdik offers a captivating look at the frontiers of expectations research revealing how our brains work in the future tense and how our assumptions about the next few milliseconds or the next few years bend reality. We learn how placebo calories can fill us up, why wine judges can't agree how fake surgery can sometimes work better than real surgery, and how imaginary power can be corrupting. We meet scientists who have found that wearing taller and more attractive avatars in a virtual world boosts confidence in real life, gambling addicts whose brains make losing feel like winning, and coaches who put blurry glasses on athletes to lift them out of slumps. Along the way, Berdik probes the paradox of expectations: Their influence seems based on illusion, even trickery, but they can create their own reality for good or for ill. Expectations can heal our bodies and make us stronger, smarter, and more successful, or they can leave us in agony, crush our spirit, and undermine our free will. If we can unlock their secrets, we may be able to harness their power and sidestep their pitfalls. Drawing on psychology, neuroscience, history, and fascinating true stories of expectations in action, *Mind Over Mind* offers a spirited journey into one of the most exciting areas of brain research today. Vigilance Robert Mackie, 2013-03-09

This volume contains the proceedings of a symposium held in St. Vincent, Italy, on August 3-6, 1976, entitled *Vigilance II: Relationships Among Theory, Physiological Correlates, and Operational Performance*. The symposium was sponsored jointly by the Human Factors Panel of the Scientific Affairs Division of NATO and by the Physiology Programs Office of the U.S. Office of Naval Research, Contract N00014-76-C-0722. These sponsorships and the helpful assistance of Dr. Donald P. Woodward and Dr. John A. Nagay are gratefully acknowledged. Following the editor's introduction, the papers appear in the order they were given at St. Vincent. In general, they are grouped according to the main topical themes of the symposium: keynote address, vehicle operation, monitoring and inspection, physiological correlates, stress effects, individual differences, and theoretical considerations. I must point out, however, that individual papers often overlapped several of these topical areas, and thus no definitive partitioning of the proceedings has been attempted. I wish to acknowledge the many contributions of my colleague Dr. James O. Hanlon to both the planning of the symposium and the preparation of the manuscript, and the invaluable role of my wife Shirley Jean in making the symposium such a pleasant one for all. In addition, I wish to recognize the countless contributions of Lynda Lee Chilton and Katherine Peimann, whose performance in composing, typing, and proofing the manuscript is certainly a tribute to human vigilance and endurance as well. *Psychosomatic Disorders* Autumn Libal, 2014-09-02

Our bodies are constantly reacting to mental stimulation. When reliving the winning goal you made in the hockey game, your face might flush, heart race, and muscles tense. A child who is being bullied at school might feel sick every morning before leaving home. A passionate kiss in the movies might make your own lips tingle. These are examples of psychosomatic reactions, physical reactions to mental or emotional symptoms. Sometimes a person's psychosomatic reaction to mental stress may be so severe that it causes a debilitating disorder. For example, Kevin sometimes still has trouble

believing his leg is truly gone He has strange sensations that he cannot account for Some are unpleasant like the constant itching where he no longer has a place to itch Others are nice surprises like when he can feel his cat brushing against where his leg should be The worst however is the pain For the all other inexplicable feelings that come and go the pain never leaves Kevin s body or mind Sometimes in the dark quiet of his bedroom he has nightmares in which he relives stepping on the land mine Only in his nightmares everything happens in slow motion He can see his leg tearing away from his body He reaches forward grabbing for his leg and the excruciating pain wakes him up He lies panting in the darkness trying to will the pain away asking himself How can something that doesn t even exist hurt so badly How can doctors treat the pain and illness in the body that are caused by the mind In this book you will learn more about Kevin s story what psychosomatic disorders are how these phantom disorders can be treated *The Role of Learning in Psychotherapy* Ruth Porter,2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world
