Baligar, Charles Allan Jones, 2010-10-19 By the year 2050 the world's population is expected to reach nine billion To feed and sustain this projected population world food production must increase by at least 50 percent on much of the same land that we farm today To meet this staggering challenge scientists must develop the technology required to achieve an evergreen revolution one

Singh, 2013 Providing comprehensive coverage on biofuel crop production and the technological environmental and resource issues associated with a sustainable biofuel industry this book is ideal for researchers and industry personnel Beginning with an introduction to biofuels and the challenges they face the book then includes detailed coverage on crops of current importance or with high future prospects including sections on algae sugar crops and grass oil and forestry species The chapters focus on the genetics breeding cultivation harvesting and handling of each crop

Agro-industrial Perspectives on Sugarcane Production under Environmental Stress Krishan K. Verma, Xiu-Peng Song, Vishnu D. Rajput, Sushil Solomon, Yang-Rui Li, Govind P. Rao, 2023-01-01 This edited volume focuses on the core aspects of sugarcane production management under stressful environments as well as innovative strategies for augmenting crop growth productivity through intrinsic and extrinsic manipulations The various chapters aim at bringing out comprehensive and advance information on different aspects of sugarcane cultivation under stress environments and impact of climate change on the sustainability of sugarcane production The book encompasses information about crop production management physiological nutritional requirements ratooning ripening and post harvest losses management It also delineates various technologies that support the continued use and improvement of sugarcane as renewable source of food fiber and bio energy The manipulations at cellular and molecular levels molecular breeding approaches and post harvest technologies are also included The area under sugarcane cultivation is gradually increasing because of its diversification potential The high

productivity and biomass of the cane crop also makes it a key source for use as bio energy crop and a promising raw material for bio based agro industries However poor crop biomass productivity due to abiotic stress is the foremost constraint in its future commercial exploitation as sustainable feed stock for bio based industries It is therefore imperative to understand the cellular molecular modulation responsible to productivity barrier under specific stress situations for better sugarcane quality and quantum under field condition Some of these innovative approaches are delineated in this book This book is of interest to progressive sugarcane growers millers industrial entrepreneurs sugarcane scientists cane development and extension officers sugar industry managers and valuable source of reference worldwide **Plant Analysis** D Reuter,JB Robinson,1997

Higher Plants, January 1979-February 1988 Charles N. Bebee,1988 *From King Cane to the Last Sugar Mill* C. Allan Jones,Robert V. Osgood,2015-03-31 *From King Cane to the Last Sugar Mill* focuses on the technological and scientific advances that allowed Hawai i s sugar industry to become a world leader and Hawaiian Commercial Sugar Company HC S to survive into the twenty first century The authors both agricultural scientists offer a detailed history of the industry and its contributions balanced with discussion of the enormous societal and environmental changes due to its aggressive search for labor land and water Sugarcane cultivation in Hawai i began with the arrival of Polynesian settlers expanded into a commercial crop in the mid 1800s and became a significant economic and political force by the end of the nineteenth century Hawai i s sugar industry entered the twentieth century heralding major improvements in sugarcane varieties irrigation systems fertilizer use biological pest control and the use of steam power for field and factory operations By the 1920s the industry was among the most technologically advanced in the world Its expansion however was not without challenges Hawai i s annexation by the United States in 1898 invalidated the Kingdom s contract labor laws reduced the plantations hold on labor and resulted in successful strikes by Japanese and Filipino workers The industry survived the low sugar prices of the Great Depression and labor shortages of World War II by mechanizing to increase productivity The 1950s and 1960s saw science driven gains in output and profitability but the following decades brought unprecedented economic pressures that reduced the number of plantations from twenty seven in 1970 to only four in 2000 By 2011 only one plantation remained Hawai i s last surviving sugar mill HC S with its large size excellent water resources and efficient irrigation and automated

systems remained generally profitable into the 2000s Severe drought conditions however caused substantial operating losses in 2008 and 2009 Though profits rebounded local interest groups have mounted legal challenges to HC S s historic water rights and the public health effects of preharvest burning While the company has experimented with alternative harvesting methods to lessen environmental impacts HC S has yet to find those to be economically viable As a result the future of the last sugar company in Hawai i remains uncertain

Biology of Adventitious Root Formation Tim D. Davis, Bruce E. Haissig, 2013-11-11 Charles E Hess Department of Environmental Horticulture University of California Davis CA 95616 Research in the biology of adventitious root formation has a special place in science It provides an excellent forum in which to pursue fundamental research on the regulation of plant growth and development At the same time the results of the research have been quickly applied by commercial plant propagators agronomists foresters and horticulturists see the chapter by Kovar and Kuchenbuch by Ritchie and by Davies and coworkers in this volume In an era when there is great interest in speeding technology transfer the experiences gained in research in adventitious root formation may provide useful examples for other areas of science Interaction between the fundamental and the applied have been and continue to be facilitated by the establishment in 1951 of the Plant Propagators Society which has evolved into the International Plant Propagators Society with active programs in six regions around the world It is a unique organization which brings together researchers in universities botanical gardens and arboreta and commercial plant propagators In this synergistic environment new knowledge is rapidly transferred and new ideas for fundamental research evolve from the presentations and discussions by experienced plant propagators In the past 50 years based on research related to the biology of adventitious root formation advances in plant propagation have been made on two major fronts

Weed Control Nicholas E. Korres, Nilda R. Burgos, Stephen O. Duke, 2018-12-19 In light of public concerns about sustainable food production the necessity for human and environmental protection along with the evolution of herbicide resistant weeds call for a review of current weed control strategies Sustainable weed control requires an integrated approach based on knowledge of each crop and the weeds that threaten it This book will be an invaluable source of information for scholars growers consultants researchers and other stakeholders dealing with either arable row cash vegetables orchards or even grassland based production systems The uniqueness of this book comes from the balanced coverage of herbicide effects on humans and environment in relation to best weed control practices of the most important cropping systems worldwide Furthermore it amalgamates and discusses the most appropriate judicious and suitable weed control strategies for a wide range of crops It reviews the available information and suggests solutions that are not merely feasible but also optimal

Soil Biota, Nutrient Cycling and Farming Systems David C. Coleman, Wilhelm Foissner, M.G. Paoletti, 1993-06-09 Soil Biota Nutrient Cycling and Farming Systems is a timely reference volume that explores the relationship between soil biota and environmental and agricultural practices It addresses topics such as agroecosystems structure and function cycling of nutrients and soil contamination use of soil

invertebrates as soil bioindicators application of organic matter to soil and impact of high input agriculture to sustainable agriculture The book will be important for anyone studying sustainable agriculture agroecology soil interacting processes crop science environmental contamination and landscape ecology Cogeneration in the Cane Sugar Industry J.H. Payne, 2012-12-02 The cane plant is probably the most efficient utilizer of sun energy for food production and at the same time provides an equivalent quantity of biomass The purpose of this book is to set down the unique position of sugar cane in the cogeneration field Simultaneous with the development of distance transmission of electricity sugar cane processors started cogeneration making use of the cane plant to supply the power for its own processing and in recent years excess power for export A broad view of cogeneration in the cane industry covering the energy available in a crop the technology of processing for optimum recovery of energy as well as sugar is presented here The book describes the most practicable processes for recovering energy in the form of process steam and electricity Cogeneration in the Cane Sugar Industry should be of interest to a broad spectrum including government agencies biomass interests power generators public utilities as well as sugar producers and technologist
