Global Environment Elizabeth Kay Berner, Robert A. Berner, 1996 In this book the geochemical cycles of the major chemical components of rocks, water, air, and life are discussed as they occur naturally and as they are perturbed by humans. Quantitative estimates are given of the fluxes of elements between major earth surface reservoirs including the atmosphere, rainwater, rocks, terrestrial and marine biota, rivers, lakes, and the oceans. The approach is worldwide in scope. The book provides an integrated approach to global geochemistry and environmental problems and introduces the reader to some fundamental concepts of geology, biogeochemistry, oceanography, meteorology, and limnology. It provides an extensive and valuable source of data for professionals while at the same time being understandable to anyone with an elementary chemical background. **The Problems of Sulphur** Sam Stuart, 2013-10-22 The Problems of Sulphur discusses all aspects of the problems associated with sulfur in coal. The book is divided into three parts. Part 1 addresses the forms of sulfur in coal and evaluates processes directed at the chemical removal of sulphur. Part 2 expands on this to look at alternative means of removing sulfur both physically and biologically. Sulfur removal during the combustion of coal and flue gas desulfurization processes. Part 3 looks at the role of sulphates in the atmosphere from the points of view of their formation, transport, and deposition, and of their effects on health, materials, and the atmosphere. The book will be of value to engineers, environmentalists, and chemists.
