## BREAD FOR LIFE

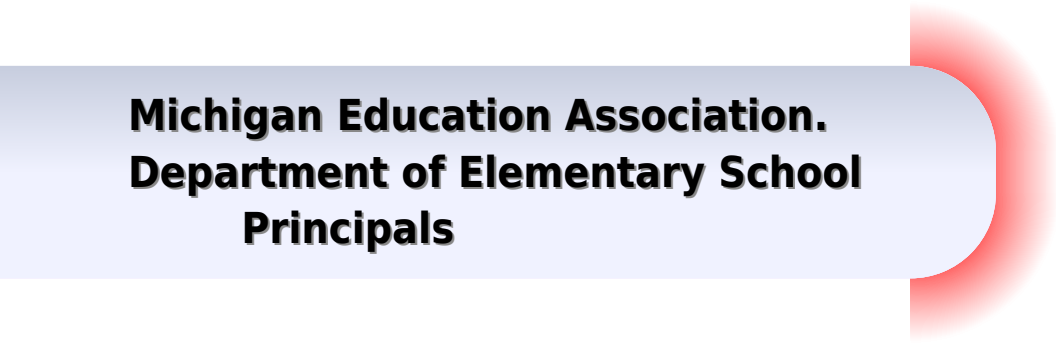

Did you know that bread has been around for more than 30,000 years? It is believed that prehistoric man started cooking a bread like mixture by frying it on stones. Today bread is one of the most popular foods in the world. This is because it provides long lasting energy for the body, is relatively simple to make and is inexpensive to buy. Bread is made from combining water and flour, with yeast being added to make the bread rise when baking. Most breads today contain many extra ingredients, such as grains and nutrients, as well as preservatives to prevent the bread from going stale. Bread is a very important part of our everyday diet as it provides us with the energy, fibre, nutrients and vitamins that we need to grow and repair our body. It is also a major source of carbohydrates. Carbohydrates give our body the energy needed to fuel our brain, kidneys, heart and muscles. Without carbohydrates you wouldn't have enough energy to learn at school, go for a walk with your family or even play on the playground.

Zaras, K. Kowal-Michalska, J. Rhodes, 2001-06-18 This volume contains the papers presented at the Third International Conference on Thin Walled Structures Cracow Poland on June 5 7 2001 There has been a substantial growth in knowledge in the field of Thin Walled Structures over the past few decades Lightweight structures are in widespread use in the Civil Engineering Mechanical Engineering Aeronautical Automobile Chemical and Offshore Engineering fields The development of new processes new methods of connections new materials has gone hand in hand with the evolution of advanced analytical

methods suitable for dealing with the increasing complexity of the design work involved in ensuring safety and confidence in the finished products Of particular importance with regard to the analytical process is the growth in use of the finite element method This method about 40 years ago was confined to rather specialist use mainly in the aeronautical field because of its requirements for substantial calculation capacity The development over recent years of extremely powerful microcomputers has ensured that the application of the finite element method is now possible for problems in all fields of engineering and a variety of finite element packages have been developed to enhance the ease of use and the availability of the method in the engineering design process      **Handbook of Test Development** Thomas M.
