Super and Parallel Computers and Their Impact on Civil Engineering Manohar P. Kamat,1986

Supercomputing in Engineering Analysis Hojjat Adeli,2020-08-13 The first volume in this new series has a companion in volume 2 unseen Parallel processing in computational mechanics The first six contributions present general aspects of supercomputing from both hardware and software engineering points of view Subsequent chapters discuss homotopy algorithms

End-User Training for Sci-Tech Databases Ellis Mount,2019-12-06 This book first published in 1990 analyses how to train end users to search with both natural language and controlled vocabularies in the sciences describes a planning assessment for implementing end user searching in a sci tech organization examines how the scientists at a major industrial research organization have begun to do more online searching with the encouragement of the information center and explores the proactive role that medical libraries have taken in training health care professionals to search MEDLINE

Optimization of Large Structural Systems G. I. N. Rozvany,1993 This is the second of two volumes which examine structural optimization of large structural systems Topics covered in these volumes include optimality criteria and topology optimization decomposition methods and approximation concepts neural networks and parallel processing

Optimization of Large Structural Systems George I. N. Rozvany,2013-11-21 G I N Rozvany ASI Director Professor of Structural Design FB 10 Essen University Essen Germany Structural optimization deals with the optimal design of all systems that consist at least partially of solids and are subject to stresses and deformations This integrated discipline plays an increasingly important role in all branches of technology including aerospace structural mechanical civil and chemical engineering as well as energy generation and building technology In fact the design of most man made objects ranging from space ships and long span bridges to tennis rackets and artificial organs can be improved considerably if human intuition is enhanced by means of computer aided systematic decisions In analysing highly complex structural systems in practice discretization is unavoidable because closed form analytical solutions are only available for relatively simple idealized problems To keep discretization errors to a minimum it is desirable to use a relatively large number of elements Modern computer technology enables us to analyse systems with many thousand degrees of freedom In the optimization of structural systems however most currently available methods are restricted to at most a few hundred variables or a few hundred active constraints
