Architectures of Sound Michael Fowler,2017-10-23 Architects are used to designing visually In order to expand their basic design tools this book explores the interactions between sound space hearing and architecture To this end the author uses contemporary and historic buildings and projects but also fictional philosophical and theoretical approaches the idea is not only to define sound as a source but also as an instrument of architectural space By introducing a metatheory of critical hearing designers are able to acoustically test their projects and contribute to their design with auditive input already at the design stage Invisible Reconstruction Lucia Patrizio Gunning, Paola Rizzi, 2022-12-06 What does it really mean to reconstruct a city after a natural biological or man made disaster Is the repair and reinstatement of buildings and infrastructure sufficient without the mending of social fabric The authors of this volume believe that the true measure of success should be societal After all a city without people is no city at all Invisible Reconstruction takes the view that effective disaster mitigation and recovery require interdisciplinary tactics Historian Lucia Patrizio Gunning and urbanist Paola Rizzi expand beyond the confines of individual disciplines or disaster studies to bring together academics and practitioners from a wide variety of disciplines comparing strategies and outcomes in different scenarios and cultures from South America Europe

and Asia From cultural heritage and public space to education and participation contributors reflect on the interconnection of people culture and environment and on constructive approaches to strengthening the intangible ties to increase resilience and reduce vulnerability By bringing practical examples of how communities and individuals have reacted to or prepared for disaster the publication proposes a shift in public policy to ensure that essential physical reinforcement and rebuilding are matched by attention to societal needs Invisible Reconstruction is essential reading for policymakers academics and practitioners working to reduce the impact of natural biological and man made disaster or to improve post disaster recovery
