The American Development Of Biology:

The American Development of Biology Ronald Rainger, 1991 The American Development of Biology Ronald Rainger, Keith R. Benson, Jane Maienschein, 2016-11-11 Selected as one of the Best Sci Tech Books of 1988 by Library Journal The essays in this volume represent original work to celebrate the centenary of the American Society of Zoologists They illustrate the impressive nature of historical scholarship that has subsequently focused on the development of biology in the United States **History of Science in United States** Marc Rothenberg, 2012-10-12 This Encyclopedia examines all aspects of the history of science in the United States with a special emphasis placed on the historiography of science in America It can be used by students general readers scientists or anyone interested in the facts relating to the development of science in the United States Special emphasis is placed in the history of medicine and technology and on the relationship between science and technology and science and medicine The Sounding of the Whale D. Graham Burnett, 2022-12-22 This wonderful book documents the interplays among science conservation and politics in the evolving career of the whale over the last century William Perrin Senior Scientist for Marine Mammals at the Southwest Fisheries Science Center NOAA Fisheries Service From biblical times whales have breached in the human imagination as looming figures of terror power confusion and mystery In the twentieth century however our understanding of and relationship to these superlatives of creation underwent some astonishing changes and with The Sounding of the Whale D Graham Burnett tells the fascinating story of the transformation of cetaceans from grotesque monsters useful only as wallowing kegs of fat and fertilizer to playful friends of humanity bellwethers of environmental devastation and finally totems of the counterculture in the Age of Aquarius When Burnett opens his story ignorance reigns even Nature was misclassifying whales at the turn of the century and the only biological study of the species was happening in gruesome Arctic slaughterhouses But in the aftermath of World War I an international effort to bring rational regulations to the whaling industry led to an explosion of global research and regulations that while well meaning were quashed or widely flouted by whaling nations the first shot in a battle that continues to this day The book closes with a look at the remarkable shift in public attitudes toward whales that began in the 1960s as environmental concerns and new discoveries about whale behavior combined to make whales an object of sentimental concern and public adulation A sweeping history grounded in nearly a decade of research The Sounding of the Whale tells a remarkable story of how science politics and simple human wonder intertwined to transform the way we see these behemoths from below **A Companion to the History of Science** Bernard Lightman, 2019-11-12 The Wiley Blackwell Companion to the History of Science is a single volume companion that discusses the history of science as it is done today providing a survey of the debates and issues that dominate current scholarly discussion with contributions from leading international scholars Provides a single volume overview of current scholarship in the history of science edited by one of the leading figures in the field Features forty essays by leading international scholars providing an overview of the key

debates and developments in the history of science Reflects the shift towards deeper historical contextualization within the field Helps communicate and integrate perspectives from the history of science with other areas of historical inquiry Includes discussion of non Western themes which are integrated throughout the chapters Divided into four sections based on key analytic categories that reflect new approaches in the field

Boundary Objects and Beyond Geoffrey C. Bowker, Stefan Timmermans, Adele E. Clarke, Ellen Balka, 2016-02-26 The multifaceted work of the late Susan Leigh Star is explored through a selection of her writings and essays by friends and colleagues Susan Leigh Star 1954 2010 was one of the most influential science studies scholars of the last several decades In her work Star highlighted the messy practices of discovering science asking hard questions about the marginalizing as well as the liberating powers of science and technology In the landmark work *Sorting Things Out* Star and Geoffrey Bowker revealed the social and ethical histories that are deeply embedded in classification systems Star's most celebrated concept was the notion of boundary objects representational forms things or theories that can be shared between different communities with each holding its own understanding of the representation Unfortunately Leigh was unable to complete a work on the poetics of infrastructure that further developed the full range of her work This volume collects articles by Star that set out some of her thinking on boundary objects marginality and infrastructure together with essays by friends and colleagues from a range of disciplines from philosophy of science to organization science that testify to the wide ranging influence of Star's work Contributors Ellen Balka Eevi E Beck Dick Boland Geoffrey C Bowker Janet Ceja Alcal Adele E Clarke Les Gasser James R Griesemer Gail Hornstein John Leslie King Cheris Kramarae Maria Puig de la Bellacasa Karen Ruhleder Kjeld Schmidt Brian Cantwell Smith Susan Leigh Star Anselm L Strauss Jane Summerton Stefan Timmermans Helen Verran Nina Wakeford Jutta Weber

The Epistemology of Development, Evolution, and Genetics Richard Burian, 2005 These essays examine the developments in three fundamental biological disciplines embryology evolutionary biology and genetics These disciplines were in conflict for much of the 20th century and the essays in this collection examine key methodological problems within these disciplines and the difficulties faced in overcoming the conflicts between them Burian skillfully weaves together historical appreciation of the settings within which scientists work substantial knowledge of the biological problems at stake and the methodological and philosophical issues faced in integrating biological knowledge drawn from disparate sources

The State of Nature Gregg Mitman, 1992-10 Although science may claim to be objective scientists cannot avoid the influence of their own values on their research In *The State of Nature* Gregg Mitman examines the relationship between issues in early twentieth century American society and the sciences of evolution and ecology to reveal how explicit social and political concerns influenced the scientific agenda of biologists at the University of Chicago and throughout the United States during the first half of this century Reacting against the view of nature red in tooth and claw ecologists and behavioral biologists such as Warder Clyde Allee Alfred Emerson and their colleagues developed research programs they hoped would validate and promote an image of

human society as essentially cooperative rather than competitive Mitman argues that Allee's religious training and pacifist convictions shaped his pioneering studies of animal communities in a way that could be generalized to denounce the view that war is in our genes

Styles of Scientific Thought Jonathan Harwood, 1993-02-15 In this detailed historical and sociological study of the development of scientific ideas Jonathan Harwood argues that there is no such thing as a unitary scientific method driven by an internal logic Rather there are national styles of science that are defined by different values norms assumptions research traditions and funding patterns The first book length treatment of genetics in Germany *Styles of Scientific Thought* demonstrates the influence of culture on science by comparing the American with the German scientific traditions Harwood examines the structure of academic and research institutions the educational backgrounds of geneticists and cultural traditions among many factors to explain why the American approach was much more narrowly focussed than the German This tremendously rich book fills a gap between histories of the physical sciences in the Weimar Republic and other works on the humanities and the arts during the intellectually innovative 1920s and it will interest European historians as well as sociologists and philosophers of science

Thinking in Psychological Science Jaan Valsiner, 2011-12-31 This book explores the development of ideas in psychology's past It is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline's future Scientists in general are known to ignore their own history considering it to be a graveyard of failures In *Thinking in Psychological Science* selected ideas of key figures in the cognitive comparative and developmental sides of psychology Karl Duncker Karl Bihler Tamara Dembo Zing Young Kuo C Lloyd Morgan Alexander Chamberlain and Arnold Gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology Representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies Yet the reality is just the opposite Science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs Still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity This book analyzes the processes involved in the search for solutions to major theoretical problems of development Kuo Gesell action and cognition Bihler Bunker Dembo and methodology Morgan Ultimately this is an exciting volume that reveals real science in the making *Thinking in Psychological Science* will be of interest to students of the social sciences and intellectual history It is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science
