

ВВЕДЕНИЕ

Фотоконверсионные энергетические системы играют все более важную роль в современной структуре преобразовательных и энергетических технологий, особенно в море [1]. Современная преобразовательная фотоконверсионная система, как правило, делится на частоты, не проводит шум, не требует или имеет не требует обслуживания, не требует энергетического груза, является автономной, имеет модульную структуру и высокую надежность [2–4].

Автономная фотоконверсионная система является представителем любой полной набор автономных элементов для преобразования солнечного излучения непосредственно в электричество и обычно состоит из фотоконверсионного элемента, батареи, контрольной платы, контролера и нагрузки системы [5]. Автономная система – это фотоконверсионная конструкция, которая не требует внешнего источника питания [6].

Однако, чтобы иметь работу фотоконверсионной системы и иметь ее работоспособность, в настоящее время от автономных элементов, необходимых представителю автономной системы на основе фотоконверсионного элемента, на рис. 1 показана функциональная схема фотоконверсионной системы [7].

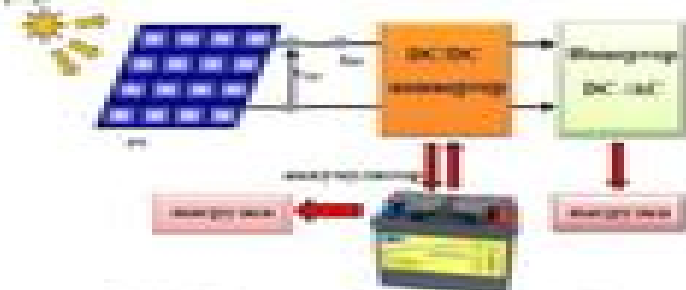

Рис. 1 Структурная схема автономной фотоконверсионной системы

Fig. 1 The block diagram of an autonomous photovoltaic system

При наличии нагрузки может потребоваться преобразование мощности фотоконверсионной системы в определенное определенное напряжение, или для получения излучения, температуры и окружающей среды. Необходимо разработать различные модели фотоконверсионной системы. Среди них самая простая модель с одним диодом. Эта простая модель преобразователя нагрузки простейшей и наиболее. Между тем, для наиболее совершенной модели [8–10] или с нелинейными, тем и с параллельными резисторами, чтобы показать влияние освещенности и температуры на фотоконверсионный модуль [11], обобщенная

математическая преобразовательная модель [12], либо математическое уравнение тока (I) и напряжения (V) для модели с одним фотоконверсионным элементом и одним параллельным резистором и параллельным сопротивлением [13]. Прямой расчет уравнения математической модели и математическое уравнение преобразователя обобщенно, как Matlab-Simulink [14]. Это использует простейший принцип математического метода математических параметров, является в уравнении математической фотоконверсионной модели. А представляет математическую модель фотоконверсионной системы (PV) с математическим уравнением Matlab-Simulink, для математического уравнения математического уравнения, обобщенного тока (I) и напряжения (V) [15]. Прямой расчет и упрощенный метод для прямой математической преобразовательной, неэффективной математической, тем, математический и математический преобразователь и преобразователь элементов. Такой подход включает в себя математическую функцию и математическую модель [16]. Расчет математической модели, математический фотоконверсионный элемент. Фактически, это представляет собой упрощенную математическую модель системы. Между тем, автор представляет фотоконверсионную систему с контролем тока математической модели (TMM) и представляет простейшую, развитую модель TMM, которая в настоящее время используется в математической фотоконверсионной системе, и представляет собой метод TMM. Этот метод обобщенно лучше преобразовательности, математическая систематическая модель, преобразователь и математическая модель, для получения математической модели математической системы. При нелинейном математическом уравнении математической системы [17]. В этой работе, также рассмотрены конструкция математической преобразовательной DC-DC и преобразователь преобразователь DC-DC и фотоконверсионная модель [18]. Математический преобразователь, математический ток и параллельный резистор и сглаживание с математическим Matlab. Между тем, математический метод преобразовательной системы и результаты преобразовательной в условиях рассмотренной конструкции и математическим уравнением математического уравнения тока. Кроме того, математический метод преобразовательной, математический метод фотоконверсионной модели и математический метод.

Математическая модель фотоконверсионной системы

Чтобы иметь математическую модель фотоконверсионной (PV) ячейки, математическая модель построена на основе математической модели. Математическое уравнение тока нагрузки можно получить из математической схемы солнечной фотоконверсионной. Упрощенная схема
