Philip's Guide to Trees of Britain & Europe Christopher John Humphries, J. R. Press, David Andrew Sutton, 2006
Philip's Guide to Trees is an easy to use identification guide to all the common European trees and many rare ones including the more commonly grown imported varieties. Many separate seasonal as well as permanent features of common species are illustrated making this book of practical value throughout the year. The quality of the artwork will enable tree lovers to identify and appreciate trees while on field trips or when studying the book at home. The text is thorough, accurate and authoritative, describing the distinctive features of genera as well as of individual species according to the following plan: habit, growth pattern, bark, branches, buds, leaves, inflorescence, flowers, fruit, seeds, taxonomic notes, ecological notes, and distribution. There is a general key to the genera and species of tree at the beginning of the book and a key to the species incorporated into the text. This will enable the reader to find any tree in the book with ease. The text also includes an introduction, glossary, and index containing both common and botanical names. The authors, Professor C. J. Humphries, J. R. Press, and Dr D. A. Sutton, are all botanists at the Natural History Museum, London. Main map scale.
Guide to Standard Floras of the World David G. Frodin, 2001-06-14
This 2001 book provides a selective annotated bibliography of the principal floras and related works of inventory for vascular plants. The second edition was completely updated and expanded to take into account the substantial literature of the late twentieth century and features a more fully developed review of the history of floristic documentation. The works covered are principally specialist publications such as floras, checklists, distribution atlases, systematic iconographies, and enumerations or catalogues, although a relatively few more popularly oriented books are also included. The Guide is organised in ten geographical divisions, with these successively divided into regions and units, each of which is prefaced with a historical review of floristic studies. In addition to the bibliography, the book includes general chapters on botanical bibliography, the history of floras, and general principles and current trends, plus an appendix on bibliographic searching, a lexicon of serial abbreviations, and author and geographical indexes.
