The Age Of Bifurcation Understanding The Changing World:

The Age of Bifurcation Ervin Laszlo,1991 Michael Carter,2003 **The Waves of Time** K. R. Dark,2016-10-06

Since the end of the Cold War analysts of international politics have given much greater attention to issues of change. It has become increasingly clear to specialists from many fields that any understanding of large scale political change must encompass far longer timescales than has been usual in the study of world politics and must incorporate multi disciplinary perspectives. This book evaluates and draws on relevant theoretical approaches from other disciplines such as sociology, economics, geography, history, anthropology and archaeology as well as evolutionary theory and the mathematical study of complexity. Using an epistemological framework, Dark sets out a theory of long term world political change, the theory of Macrodynamics. This is then applied to historical, anthropological and archaeological data to explain the changing forms of political organization from the earliest human societies to the late twentieth century. The resulting analysis is a reinterpretation of the processes of global political change in the past and present. This in turn opens new areas of enquiry in the study of international relations and has profound implications for how we understand the changing world of today.

North Korea under Kim Jong Il Sung Chull Kim,2012-02-16 North Korea has long been a country of mystique, both provoking two nuclear crises and receiving aid from the international community and South Korea in more recent times. North Korea under Kim Jong Il examines how internal changes in North Korea since the early 1970s have structured that nation's apparently provocative nuclear diplomacy and recent economic reform measures. To understand these changes, author Sung Chull Kim uncovers relatively unknown internal aspects of the country under Kim Jong Il's leadership. His account, based on a thorough examination of primary sources, traces the origins, consolidation and dissonance of North Korea's systemic identity. He reveals how official and unofficial developments in the domains of North Korea's politics, ideology, economics and intellectual/cultural affairs have brought about system-wide duality, particularly between socialist principles embedded in the official ideology and economic institutions.

The Edusemiotics of Images Inna Semetsky,2013-02-11 Semetsky's new book offers a bracing account of Tarot semiotics in view of its deep significance for educational experience. Analyzing the symbolic language of Tarot images that express the intimations of the unconscious, she invites readers to explore novel ways of learning about the nature of ourselves and the world we are situated in. Combining thorough research with an accessible style, this groundbreaking book is essential reading for present and future generations of practitioners, academics and students across disciplines. Pia Br nzeu, Professor of English Literature and Vice Rector of the University of Timisoara, Romania, author of *Corridors of Mirrors*. A sequel to the author's *Re-Symbolization of the Self: Human Development and Tarot Hermeneutic and Semiotics Education Experience*. Semetsky's new book presents the Tarot sign system as a school of ethical living. Bringing the philosophies of Peirce, Deleuze, Dewey, Whitehead and Gebser in a dialogue with the cutting edge science of coordination dynamics, she grounds the art of Tarot in the logic of signs acting across nature, culture and human

mind Building on Noddings maternal factor Semetsky demonstrates how the lessons embodied in Tarot symbolism recover the feminine value of relations and contribute to Self Other integration Such is the message of Tarot images The Image is the Message Igor Klyukanov Professor of Communication Eastern Washington University USA editor Russian Journal of Communication author of A Communication Universe Manifestations of Meaning Stagings of Significance Semetsky s amalgamation of the techniques of visual communication with the emerging field of edusemiotics is an absolute masterpiece in transdisciplinarity By forging diverse strands of inquiry into an overall model of how images enhance learning Semetsky s new book provokes us to take a fresh look at iconic information and is a required reading for everyone who is engaged with the art and science of visual semiotics at the intersection of nature and culture Marcel Danesi Professor of Anthropology University of Toronto Canada editor in chief Semiotica author of The Quest for Meaning A Guide to Semiotic Theory and Practice Finally An in depth look at Tarot from within the field of semiotics a perspective that had been inexplicably overlooked until now As a language of exile from language Tarot cards are silent words that became images Here is a book that turns our thirst for symbols into a learning tool The sign sings in Inna Semetsky s work Enrique Enriquez con temporary tarot [www tarologyfilm com](http://www.tarologyfilm.com) author of Tarology **Havoc, Thy Name Is Twenty-First Century!** Peter Pogany, 2015-10-16 Just to maintain our standard of living we need to grow the worldwide economy at an unsustainable rate As we seek to hit such lofty targets we are bound to deplete our resources and cause environmental crises on a scale that we have never seen before Revolutions terrorism and wars will follow Peter Pogany examines the problems we face and argues that human culture is governed by thermodynamic cycles of steady states interrupted by chaotic transitions Specifically he postulates that a steady state was interrupted by World War I with a chaotic transition following World War II which has led us to the current world order His theory predicts that global society is drifting toward a new form of self organization that will recognize limits to demographic economic expansion but only after we go through a new chaotic transition that will start sometime between now and the 2030s Havoc Thy Name is Twenty First Century delivers sobering thoughts on where the world is headed but it also offers a glimpse of a bright future that we can embrace once we get through the darkness to come

Introduction to Non-equilibrium Physical Chemistry R. P. Rastogi, 2007-10-16 Introduction to Non equilibrium Physical Chemistry presents a critical and comprehensive account of Non equilibrium Physical Chemistry from theoretical and experimental angle It covers a wide spectrum of non equilibrium phenomena from steady state close to equilibrium to non linear region involving transition to bistability temporal oscillations spatio temporal oscillations and finally to far from equilibrium phenomena such as complex pattern formation dynamic instability at interfaces Chaos and complex growth phenomena fractals in Physico chemical systems Part I of the book deals with theory and experimental studies concerning transport phenomena in membranes Thermo osmosis Electroosmotic and in continuous systems Thermal diffusion Soret effect close to equilibrium Experimental tests provide insight into the domain of validity of Non equilibrium Thermodynamics

which is the major theoretical tool for this region Later developments in Extended Irreversible Thermodynamics and Non equilibrium Molecular dynamics have been discussed in the Appendix Part II deals with non linear steady states and bifurcation to multistability temporal and spatio temporal oscillations Chemical waves Similarly Part II deals with more complex phenomena such as Chaos and fractal growth occurring in very far from equilibrium region Newer mathematical techniques for investigating such phenomena along with available experimental studies Part IV deals with analogous non equilibrium phenomena occurring in the real systems Socio political Finance and Living systems etc for which physico chemical systems discussed in earlier chapters provide a useful model for development of theories based on non linear science and science of complexity The book provides a critical account of theoretical studies on non equilibrium phenomenon from region close to equilibrium to far equilibrium Experimental studies have been reported which provide test of the theories and their limitations Impacts of the concepts developed in non equilibrium Physical Chemistry in sociology economics and other social science and living systems has been discussed *The Mind of Society* Yvon Provencal, 2013-12-19 First Published in 1999 This book brings together the ideas of theoretician Marvin Minsky and philosopher Pierre Teilhard de Chardin Provencal's theory inverts Minsky's society of the mind into the mind of society giving a new and firm basis to the Teilhardian idea of Noosphere and allowing for unsuspected transdisciplinary regularities between several scientific domains including physics biology and anthropology Provencal aims to show that a very special type of global planetary consciousness is emerging and to explain better the way in which human ideas constitute a global auto organizing system Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt

problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence
