*The Great English Earthquake* Peter Haining, 2002-08-30 The event was a stunning blow to Victorian England the heart of the great British Empire Consequently its extent and damage were played down by the authorities and the national press Based on contemporary reports personal statements and exhaustive research this illustrated history is a dramatic and exciting reconstruction of the event On the morning of 22 April 1884 the unthinkable happened a major earthquake struck the British Isles In under a minute almost the entire length and breadth of England had been shaken by a violent tremor which devastated the county of Essex its epicentre and caused damage and panic as far north as Altrincham Cheshire and to the south was registered across the English Channel in Boulogne and Calais It was about 9 20 a m that a peculiar and alarming noise was suddenly heard which to some seemed to be overhead to others underground and which has been variously compared to distant thunder to the rumbling of a heavy wagon to the discharge of a volley of Infantry or to the whirring of a huge flock of birds as they rise from the ground or floor beneath one's feet and of the swaying to and fro of walls houses and all kinds of fixed outdoors bricks tiles chimneys etc began to clatter down The noise seemed loudest indoors but perhaps the experience of those who were standing still in the open air was yet more alarming for they could see the solid earth as well as whatever was upon it tremble and heave up and down In some places the earth even in the Scripture phrase Opened her mouth An eyewitness's account of the 1884 earthquake

*Geological Hazards in the UK* D.P. Giles, J.S. Griffiths, 2020-06-09 The UK is perhaps unique globally in that it presents the full spectrum of geological time stratigraphy and associated lithologies within its boundaries With this wide range of geological assemblages comes a wide range of geological hazards whether they be geophysical earthquakes effects of volcanic eruptions tsunami landslides geotechnical collapsible compressible liquefiable shearing swelling and shrinking soils geochemical dissolution radon and methane gas hazards or georesource related coal chalk and other mineral extraction An awareness of these hazards and the risks that they pose is a key requirement of the engineering geologist The Geological Society considered that a Working Party Report would help to put the study and assessment of geohazards into the wider

social context helping the engineering geologist to better communicate the issues concerning geohazards in the UK to the client and the public This volume sets out to define and explain these geohazards to detail their detection monitoring and management and to provide a basis for further research and understanding
