The Gulf Of Aqaba Ecological Micropaleontology:

The Gulf of Aqaba Zeev Reiss, Lukas Hottinger, 2012-12-06 The reconstruction of ancient marine environments is an important task of the Earth Sciences of great interest to geology pure and applied to oceanography and climatology as well as to such fields as ecology and evolution In principle such reconstructions are based on the actualistic approach of the present is the key to the past Since the deciphering of past environmental changes either natural or man made has considerable bearing on planning the past may provide a key to the future Paleoenvironmental interpretations in the marine realm are based to a great extent on assemblages of fossils recovered from ancient sediments in outcrops and from land based or submarine drillings Observable lateral sequences of assemblages in contemporaneous strata the known or assumed functional or adaptive significance of preserved skeletal structures as well as their evolution through time and space provide by themselves indications of ancient environmental settings In some cases even present day ecological considerations may be derived from analysis of fossils *The Gulf of Aqaba* Zeev Reiss, 1984
