Sketching the Moon Richard Handy, Deirdre Kelleghan, Thomas McCague, Erika Rix, Sally Russell, 2011-12-11 For anyone artistically inclined observing the Moon and attempting to sketch or paint it can easily become a passion The Moon presents a broad array of tone texture and form Capturing this in a painting or sketch at the eyepiece of a telescope or even with binoculars develops observational skills leaves a record of the observation and can also be a delightful and rewarding pastime However the choice of media available is extensive acrylic paint oils pen charcoal etc and even computer art programs and there is no existing text that fully explains all lunar sketching and painting techniques in each respective medium This beautiful and graphically rich book fulfills this requirement It presents detailed step by step instructions in the form of illustrated tutorials for every major medium employed to represent the Moon It also provides practical advice on how to sketch outdoors at night not ideal conditions for an artist This is easily the most extensive book on the subject of lunar art for amateur astronomers particularly those observing through a telescope The diverse features of the lunar surface will attract and entice readers to review the number of different media presented exciting and inspiring them with the possibilities of learning to depict all of the fascinating aspects of Earth's very own satellite

Real Astronomy with Small Telescopes Michael Gainer, 2007-06-04 The small refracting telescope with its simple direct design and construction and permanently aligned optics is the time tested standard for personal use Easily portable it can be taken out of the house and set up at a moment's notice Or it can be packed conveniently into a small car for traveling to a dark observing site With moderate care and minimal maintenance the telescope and mount can last for generations These instruments provide sharp crisp high contrast images of the Moon and planets They are less susceptible to the effects of unstable air than larger ones and because of their low maintenance and durability they are ideal for the parent educator or lifelong learner Until recently

however the high cost of small telescopes of sufficient quality for serious astronomical use has limited their accessibility. During the past decade innovations in optical design and manufacture have lowered cost and improved quality. Current developments in lens design make it possible to produce affordable refracting telescopes with short tube lengths and greater versatility. The once very costly 90 mm Maksutov-Cassegrain with its optimum combination of effective optics and portability now sells for a modest price. I have often seen small instruments referred to as grab and go or quick look not worthy of consideration for serious observing. I maintain they can be much more. Despite their limits in types of observation, 80 mm refractors and 90 mm Maksutovs have sufficient aperture and magnifying power to provide a lifetime of observing pleasure. They are ideal for lunar occultation measurements, tracking the solar activity cycle, observing variable stars, and measuring binary stars. Although all the activities described here are equally applicable to larger instruments, none of them requires an aperture larger than 80 mm. Through the use of common digital cameras, the limiting stellar magnitude and image scale of small telescopes can be increased dramatically, thus providing results one normally expects from larger instruments. Much of this book applies that principle to making interesting and useful astronomical observations. I have taken novel approaches to extending the use of small instruments for quantitative observations by applying unique methods for the analysis of digital camera photographs.

Sky and Telescope Charles Federer, 1956 **First Light and Beyond** D. A. Jenkins, 2015-07-28

Amateur astronomers who have been disappointed by the results of an observing session can take comfort in the guidance of this book, which advises how to still gain useful experience in seemingly failed nights at the telescope. In a world with imperfect seeing conditions, incredible observing sessions are often mixed with less inspiring ones, discouraging the amateur observer. This book is designed to minimize subsequent disappointment for astronomers who encounter a few bad observing sessions, helping novice observers take something worthwhile away each and every time they go out under the night sky, regardless of the observations that were originally planned. Almost every observer remembers his first sight of ringed Saturn hanging in the blackness of space. Practitioners agree that there is something special about visual observing. Real-time observations at the eyepiece can provide fleeting yet intense feelings that connect us with the universe in unique ways. But when expectations aren't met at the eyepiece, there are other ways to profit from the practice of astronomy. These rewards, though less showy, are well worth cultivating. This is a book that will help the reader see what constitutes a successful visual observing session. It explains the nature of the objects that the observer is seeing and advises how best to use their equipment. There are many hints and tips about how best to locate, recall, and record observations, including suggestions for trips to areas where there are dark skies and to public observatories. Amateur astronomy is a journey from the urban backyard all the way to dark rural skies, and with this guide, the journey can be smooth.

Finding a Million-Star Hotel Bob Mizon, 2016-07-04

Bob Mizon, one of the world's best known campaigners against the veil of light

pollution that has taken away the starry sky from most of the world's population takes readers to a hundred places in the UK and the USA where the wonders of the night sky might still be enjoyed in perfect or near perfect night skies Visiting small hotels and simple campsites and savoring vast dark sky reserves where the night sky is actively protected The Million Star Hotel celebrates the black skies of yesteryear which may become a reality for more and more of us as modern technology reins in lighting and puts it only where needed How can you prepare for your stay beneath the stars What astronomy can you do during the daytime What kind of equipment will you need Questions such as these are answered and if town dwellers return inspired and Bob hopes also inspired to look with fresh eyes at their own local lighting there is enough information here for them to equip themselves for some urban astronomy too
