**Interactive Granular Computations in Networks and Systems Engineering: A Practical Perspective** Andrzej Jankowski, 2017-06-25 The book outlines selected projects conducted under the supervision of the author Moreover it discusses significant relations between Interactive Granular Computing IGrC and numerous dynamically developing scientific domains worldwide along with features characteristic of the author's approach to IGrC The results presented are a continuation and elaboration of various aspects of Wisdom Technology initiated and developed in cooperation with Professor Andrzej Skowron Based on the empirical findings from these projects the author explores the following areas a understanding the causes of the theory and practice gap problem TPGP in complex systems engineering CSE b generalizing computing models of complex adaptive systems CAS in particular natural computing models by constructing an interactive granular computing IGrC model of networks of interrelated interacting complex granules c granules belonging to a single agent and or to a group of agents c developing methodologies based on the IGrC model to minimize the negative consequences of the TPGP The book introduces approaches to the above issues using the proposed IGrC model In particular the IGrC model refers to the key mechanisms used to control the processes related to the implementation of CSE projects One of the main aims was to develop a mechanism of IGrC control over computations that model a project's implementation processes to maximize the chances of its success while at the same time minimizing the emerging risks In this regard the IGrC control is usually performed by means of properly selected and enforced among project participants project principles These principles constitute examples of c granules expressed by complex vague concepts represented by c granules too The c granules evolve with time in particular the meaning of the concepts is also subject of change This methodology is illustrated using project principles applied by the author during the implementation of the POLTAX AlgoTradix Merix and Excavio projects outlined in the book

**In Two Minds** Jonathan St. B. T. Evans, Keith Frankish, 2009 This book explores the idea that we have two minds one that is automatic unconscious and fast the other controlled conscious and slow In recent years there has been great interest in so called dual process theories of reasoning and rationality According to dual process theories there are two distinct systems underlying human reasoning an evolutionarily old system that is associative automatic unconscious parallel and fast and a more recent distinctively human system that is rule based controlled conscious serial and slow Within the former processes are held to be innate and to use heuristics which evolved to solve specific adaptive problems In the latter processes are taken to be learned flexible and responsive to rational norms Despite the attention these theories are attracting there is still poor communication between dual process theorists themselves and the substantial bodies of work on dual processes in cognitive psychology and social psychology remain isolated from each other This book brings together leading researchers on dual processes to summarize the state of the art highlight key issues present different perspectives explore implications and provide a stimulus to further work It includes new ideas about the human mind both by contemporary philosophers interested in broad theoretical questions about mental architecture and by psychologists

Behavioral Law and Economics Eyal Zamir, Doron Teichman, 2018-06-05 In the past few decades economic analysis of law has been challenged by a growing body of experimental and empirical studies that attest to prevalent and systematic deviations from the assumptions of economic rationality While the findings on bounded rationality and heuristics and biases were initially perceived as antithetical to standard economic and legal economic analysis over time they have been largely integrated into mainstream economic analysis including economic analysis of law Moreover the impact of behavioral insights has long since transcended purely economic analysis of law in recent years the behavioral movement has become one of the most influential developments in

**Dual-process Theories in Social Psychology** Shelly Chaiken, Yaacov Trope, 1999-02-19 This informative volume

presents the first comprehensive review of research and theory on dual process models of social information processing. These models distinguish between qualitatively different modes of information processing in making decisions and solving problems e.g. associative versus rule based, controlled versus uncontrolled and affective versus cognitive modes. Leading contributors review the basic assumptions of these approaches and review the ways they have been applied and tested in such areas as attitudes, stereotyping, person perception, memory and judgment. Also examined are the relationships between different sets of processing modes, the factors that determine their utilization and how they work in combination to affect responses to social information.

The Handbook of Rationality Markus Knauff, Wolfgang Spohn, 2021-12-14. The first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines. Both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines. This volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality. Written by leading experts from both disciplines. The Handbook of Rationality covers the main normative and descriptive theories of rationality: how people ought to think, how they actually think and why we often deviate from what we can call rational. It also offers insights from other fields such as artificial intelligence, economics, the social sciences and cognitive neuroscience. The Handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy, psychology and other disciplines. Following the basic distinction between theoretical and practical rationality, the book first considers the theoretical side including normative and descriptive theories of logical, probabilistic, causal and defeasible reasoning. It then turns to the practical side discussing topics such as decision making, bounded rationality, game theory, deontic and legal reasoning and the relation between rationality and morality. Finally, it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking, scientific rationality, how children learn to reason rationally and the connection between intelligence and rationality.
