Social Contract A Personal Inquiry Into:

The Social Contract Robert Ardrey, 1970 This title denies that men are created equal Jacket
Mousery Lee Alan Dugatkin, 2024-10-03 A bizarre and compelling biography of a scientist and his work using rodent cities to question the potential catastrophes of human overpopulation It was the strangest of experiments What began as a utopian environment where mice had sumptuous accommodations had all the food and water they could want and were free from disease and predators turned into a mouse hell Science writer and animal behaviorist Lee Alan Dugatkin introduces readers to the peculiar work of rodent researcher John Bumpass Calhoun In this enthralling tale Dugatkin shows how an ecologist turned psychologist turned futurist became a science rock star embedded in the culture of the 1960s and 1970s As interest grew in his rodent cities Calhoun was courted by city planners and his work was reflected in everything from Tom Wolfe's hard hitting writing to the children's book Mrs Frisby and the Rats of NIMH He was invited to meetings with the Royal Society and the pope and taken seriously when he proposed a worldwide cybernetic brain a decade before others made the internet a reality Readers see how Calhoun's experiments rodent apartment complexes like Mouse Universe 25 led to his concept of behavioral sinks with real effects on public policy discussions Overpopulation in Calhoun's mouse and rat complexes led to the loss of sex drive the absence of maternal care and a class of automatons that included the beautiful ones who spent their time grooming themselves while shunning socialization Calhoun and those who followed his work saw the collapse of this mouse population as a harbinger of the ill effects of an overpopulated human world Drawing on previously unpublished archival research and interviews with Calhoun's family and former colleagues Dugatkin offers a riveting account of an intriguing scientific figure Considering Dr Calhoun's experiments he explores the changing nature of scientific research and delves into what the study of animal behavior can teach us about ourselves **Suprahumanism** Daniel S. Forrest, 2014-08-09 We are at a crucial point in time a moment of transition as important as the emergence of Homo sapiens or the beginning of civilisation after the Neolithic Revolution Paradoxically the triumph of the West also called globalisation means the death of Europe and European man Our destiny hangs between two options either to complete the triumph of the egalitarian conception of the world which will bring about the end of history or to promote a historical regeneration Nietzsche prophesied that the Earth will eventually belong to either the last man or to the superman There are no other alternatives *Biology*, Encyclopedia of Anthropology H. James Birx, 2006 Focuses on physical social and applied anthropology archaeology linguistics and symbolic communication Topics include hominid evolution primate behaviour genetics ancient civilizations cross cultural studies and social theories The Metaphysics of Liberty Frank Forman, 2012-12-06 Philosophy suffers from an excess of convoluted introspection One result is that concepts multiply unchecked That some events have observable causes gets reified into a First Cause or in a more secular age to the thesis that every event is fatalistically determined Another drawback of convoluted introspection is that tiny but crucial assumptions slip

in often unawares with the result that densely argued counter tomes are written in reply and no progress is made toward any kind of consensus At bottom subjectivity reigns I exaggerate Toward the other pole of the subjectivity objectivity continuum consensus among scientists is in fact always at a good healthy distance from compulsive unanimity New theories replace old and at any one time the evidence can usually be interpreted two ways Indeed it is possible to pile epicycle upon epicycle in the Ptolemaic system of the heavens and approximate the ellipses planets travel in the Copernican system What cinched the case for Copernicus was not simplicity after all alchemy is simpler than chemistry Nor was it experiment there were no moon shots back then Rather it was Newton's foundations He established a physics for the earth and the heavens alike Earthly physics we can verify and it does not jell with the Ptolemaic system

Creatures of Cain Erika Lorraine Milam, 2018-12-11

How Cold War America came to attribute human evolutionary success to our species' unique capacity for murder After World War II the question of how to define a universal human nature took on new urgency *Creatures of Cain* charts the rise and precipitous fall in Cold War America of a theory that attributed man's evolutionary success to his unique capacity for murder Drawing on a wealth of archival materials and in depth interviews Erika Lorraine Milam reveals how the scientists who advanced this killer ape theory capitalized on an expanding postwar market in intellectual paperbacks and widespread faith in the power of science to solve humanity's problems even to answer the most fundamental questions of human identity The killer ape theory spread quickly from colloquial science publications to late night television classrooms political debates and Hollywood films Behind the scenes however scientists were sharply divided their disagreements centering squarely on questions of race and gender Then in the 1970s the theory unraveled altogether when primatologists discovered that chimpanzees also kill members of their own species While the discovery brought an end to definitions of human exceptionalism delineated by violence Milam shows how some evolutionists began to argue for a shared chimpanzee human history of aggression even as other scientists discredited such theories as sloppy popularizations A wide ranging account of a compelling episode in American science *Creatures of Cain* argues that the legacy of the killer ape persists today in the conviction that science can resolve the essential dilemmas of human nature

The Mastery of Submission John K.

Noyes, 2018-09-05 Individuals sometimes derive sexual pleasure from submission to cruel discipline While that predilection was noted as early as the sixteenth century masochism was not codified as a concept until 1890 According to John K Noyes its invention reflected a crisis in the liberal understanding of subjectivity and sexuality which continues to inform discussions of masochism today In essence it remains a political concept Viennese physician Richard von Krafft Ebing coined the term masochism based on the work of Leopold von Sacher Masoch Noyes analyzes the social and political problems that inspired the concept suggesting for example that the triumphant expansion of European colonialism was in part animated by an ambivalence in masculine sexuality Noyes documents the evolution of the concept of masochism with scenes in literature from John Cleland's *Fanny Hill* through Sacher Masoch's *Venus in Furs* and Pauline Reage's *Story of O* Analysis of Freud's

vastly influential rereading of masochism precedes an exploration of the work of his successors including Wilhem Reich Theodor Reik Helene Deutsch and Karen Horney Noyes suggests that the thematics of feminine masochism emerged only gradually from an exclusively male concept **On Human Nature** Jonathan H. Turner,2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex

Vegetarianism and Science Fiction Joshua Bulleid,2023-10-06 Vegetarianism and Science Fiction A History of Utopian Animal Ethics examines how vegetarian ideals promoted within science fiction and utopian literature have had a real world impact on the awareness and spread of vegetarianism and animal advocacy as well as how the genres engagements have been altered to reflect changes in ethical and environmental philosophy Author Joshua Bulleid examines the representation of vegetarianism in the works of major science fiction authors including Mary Shelley H G Wells Arthur C Clarke Philip K Dick Ursula K Le Guin Ernest Callenbach Marge Piercy Octavia E Butler Kim Stanley Robinson and Margaret Atwood within their evolving social contexts tracing the development of vegetarian trends and their science fictional representations from the early nineteenth century to the present day *Education for All* Gajendra K. Verma,1989 Education For All was a report published in 1985 covering achievement and under achievement teacher training and mother tongue teaching of the ethnic minority groups In this volume a group of educationalists reflect on the report *Library Book Catalog* United States.
