## **Socially Intelligent Agents:**

**Socially Intelligent Agents** Kerstin Dautenhahn, Alan H. Bond, Lola Canamero, Bruce Edmonds, 2006-04-11 Socially situated planning provides one mechanism for improving the social awareness of agents. Obviously, this work is in the preliminary stages and many of the limitations and the relationship to other work could not be addressed in such a short chapter. The chief limitation of course is the strong commitment to defining social reasoning solely at the meta level which restricts the subtlety of social behavior. Nonetheless, our experience in some real world military simulation applications suggest that the approach even in its preliminary state is adequate to model some social interactions and certainly extends the state of the art found in traditional training simulation systems.

*Socially Intelligent Agents* Kerstin Dautenhahn, Chisato Numaoka, 1998

**Social Intelligence** Nathan Emery, Nicola Clayton, Christopher D. Frith, 2008 Why are humans so clever? The Social intelligence hypothesis explores the idea that this cleverness has evolved through the increasing complexity of social groups. Our ability to understand and control nature is a by-product of our ability to understand the mental states of others and to use this knowledge to cooperate or deceive. These abilities have not emerged out of the blue. They can be found in many social animals that cooperate and compete with one another: birds as well as mammals. This book brings together contributions from an impressive list of authorities in the field, appropriately concluding with a chapter by Nick Humphrey, one of the pioneers in this field. This volume examines social intelligence in many different animal species and explores its development, evolution, and the brain systems upon which it depends. Better understanding and further development of social intelligence is critical for the future of the human race and the world that we inhabit. Our problems will not be solved by mere cleverness but by increased social cooperation.

*Human Cognition and Social Agent Technology* Kerstin Dautenhahn, 2000-03-15 Human Cognition and Social Agent Technology is written for readers who are curious about what human social cognition is and whether and how advanced software programs or robots can become social agents. Topics addressed in 16 peer-reviewed chapters by researchers at the forefront of agent research include Narrative intelligence and implementations of story telling systems, socially situated avatars and conscious software agents, cognitive architectures for socially intelligent agents, agents with emotions, design issues for interactive systems.

artificial life agents contributions to agent design from artistic practice and a Cognitive Technology view on living with socially intelligent agents The book addresses both software and robotic agents On the one hand justice is done to the scientific and technical aspects and on the other hand the reader will learn about pioneering technological developments which are necessary for a public discourse and critical evaluation on where social agent technology is leading us and how such a development can be shaped in order to meet the social cultural and cognitive needs of humans The book is suitable for students researchers and everyone interested in this emerging and quickly growing field it does not require any specialist background knowledge Series B      *The Handbook on Socially Interactive Agents* Birgit Lugin, Catherine Pelachaud, David Traum, 2022-10-19 The Handbook on Socially Interactive Agents provides a comprehensive overview of the research fields of Embodied Conversational Agents Intelligent Virtual Agents and Social Robotics Socially Interactive Agents SIAs whether virtually or physically embodied are autonomous agents that are able to perceive an environment including people or other agents reason decide how to interact and express attitudes such as emotions engagement or empathy They are capable of interacting with people and one another in a socially intelligent manner using multimodal communicative behaviors with the goal to support humans in various domains Written by international experts in their respective fields the book summarizes research in the many important research communities pertinent for SIAs while discussing current challenges and future directions The handbook provides easy access to modeling and studying SIAs for researchers and students and aims at further bridging the gap between the research communities involved In two volumes the book clearly structures the vast body of research The first volume starts by introducing what is involved in SIAs research in particular research methodologies and ethical implications of developing SIAs It further examines research on appearance and behavior focusing on multimodality Finally social cognition for SIAs is investigated using different theoretical models and phenomena such as theory of mind or pro sociality The second volume starts with perspectives on interaction examined from different angles such as interaction in social space group interaction or long term interaction It also includes an extensive overview summarizing research and systems of human agent platforms and of some of the major application areas of SIAs such as education aging support autism and games      **Regulated Agent-Based Social Systems** Gabriela Lindemann, Daniel Moldt, 2004-02-10 This book presents selected extended and reviewed versions of the papers accepted for the First International Workshop on Regulated Agent Systems Theory and Applications RASTA 2002 held in Bologna Italy in July 2002 as part of AAMAS 2002 In addition several new papers on the workshop theme are included as well these were submitted and reviewed in response to a further call for contributions The construction of artificial agent societies deals with questions and problems that are already known from human societies The 16 papers in this book establish an interdisciplinary community of social scientists and computer scientists devoting their research interests to exploiting social theories for the construction and regulation of multi agent systems      **Intelligent Agent Technology** Ning Zhong, 2001 This volume is an

attempt to capture the essence of the state of the art of intelligent agent technology and to identify the new challenges and opportunities that it is or will be facing The most important feature of the volume is that it emphasizes a multi faceted holistic view of this emerging technology from its computational foundations in terms of models methodologies and tools for developing a variety of embodiments of agent based systems to its practical impact on tackling real world problems
