Krishna, 2024-09-30 This book focuses on the historical and sociological dimensions of scientists working in laboratories in India offering insights into the historical sociological and policy factors that shape scientific pursuits It illuminates the challenges accomplishments and the evolving role of science in societal development The author initiates a broader discourse on the interplay between scientific advancements societal contexts and policy frameworks The book fosters a deeper understanding of science's role in shaping India's social fabric and contributing to the global scientific dialogue It also explores issues such as brain drain science activism and the conflict between university and government run models of science Lucid and topical the book will be of considerable interest to both social and natural scientists as well as the general academic community including research students in science technology history social history of science science and technology studies and innovation policies      **Basic and Applied Research** David Kaldewey, Désirée Schauz, 2018-04-25 The distinction between basic and applied research was central to twentieth century science and policymaking and if this framework has been contested in recent years it nonetheless remains ubiquitous in both scientific and public discourse Employing a transnational diachronic perspective informed by historical semantics this volume traces the conceptual history of the basic applied distinction from the nineteenth century to today taking stock of European developments alongside comparative case studies from the United States and China It shows how an older dichotomy of pure and applied science was reconceived in response to rapid scientific progress and then further transformed by the geopolitical circumstances of the postwar era      **Bulletin of the Atomic Scientists**, 1967-10 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world      *Nuclear Weapons, Scientists, And The Post-cold War Challenge: Selected Papers On Arms Control* Sidney D Drell, 2007-01-16 This volume

includes a representative selection of Sidney Drell's recent writings and speeches circa 1993 to the present on public policy issues with substantial scientific components. Most of the writings deal with national security, nuclear weapons, and arms control and reflect the author's personal involvement in such issues dating back to 1960. Fifteen years after the demise of the Soviet Union, the gravest danger presented by nuclear weapons is the spread of advanced technology that may result in the proliferation of nuclear weapons. Of most concern would be their acquisition by hostile governments and terrorists who are unconstrained by accepted norms of civilized behavior. The current challenges are to prevent this from happening and at the same time to pursue aggressively the opportunity to escape from an outdated nuclear deterrence trap. Shaping Biology

Toby A. Appel, 2003-04-30. Historians of the postwar transformation of science have focused largely on the physical sciences, especially the relation of science to the military funding agencies. In *Shaping Biology*, Toby A. Appel brings attention to the National Science Foundation and federal patronage of the biological sciences. Scientists, by training NSF biologists, hoped in the 1950s that the new agency would become the federal government's chief patron for basic research in biology, the only agency to fund the entire range of biology from molecules to natural history museums for its own sake. Appel traces how this vision emerged and developed over the next two and a half decades from the activities of NSF's Division of Biological and Medical Sciences, founded in 1952, through the cold war expansion of the 1950s and 1960s and the constraints of the Vietnam War era to its reorganization out of existence in 1975. This history of NSF highlights fundamental tensions in science policy that remain relevant today: the pull between basic and applied science funding; individuals versus funding departments or institutions; elitism versus distributive policies of funding; issues of red tape and accountability. In this NSF-funded study, Appel explores how the agency developed, how it worked, and what difference it made in shaping modern biology in the United States. Based on formerly untapped archival sources as well as on interviews of participants and building upon prior historical literature, *Shaping Biology* covers new ground and raises significant issues for further research on postwar biology and on federal funding of science in general. *International Social Science Journal*, 2004-06. *The Innovation Union in Europe*

Elias G. Carayannis, George M. Korres, 2013-01-01. One of the most important economic events in recent decades has been the on-going process of European integration. This book provides a basic yet rigorous understanding of the current issues and problems of economic integration and innovation in Europe and argues that national or regional economic development depends mainly on technical change, social and human capital, and knowledge creation and diffusion. This is clearly evident in the role of the Quadruple Innovation Helix of government, university, industry, and civil society. Uniquely, the book examines the many aspects and consequences of the integration process that are obscure or as yet under-researched. The authors explore a wide range of topics, methodologies, and perspectives in order to provide a stimulating and wide-ranging analysis. *The Innovation Union in Europe* will be of interest to students, economic theorists, empirical and social scientists, policy makers, as well as the informed general reader. **Assessing the Societal Implications of Emerging**

**Technologies** Evan Michelson, 2016-05-12 A growing problem of interest in the field of science and technology policy is that the next generation of innovations is arriving at an accelerating rate and the governance system is struggling to catch up. Current approaches and institutions for effective technology assessment are ill suited and poorly designed to proactively address the multidimensional interconnected societal impacts of science and technology advancements that are already taking place and expected to continue over the course of the 21st century. This book offers tangible insights into the strategies deployed by well known high profile organizations involved in anticipating the various societal and policy implications of nanotechnology and synthetic biology. It focuses predominantly on an examination of the practices adopted by the often cited and uniquely positioned Project on Emerging Nanotechnologies in the United States as well as being informed by comparisons with a range of institutions also interested in embedding forward looking perspectives in their respective area of innovation. The book lays out one of the first actionable roadmaps that other interested stakeholders can follow when working toward institutionalizing anticipatory governance practices throughout the policymaking process. **Information**

**Society Studies** Alistair S. Duff, 2013-12-02 We are often told that we are living in an information society or that we are information workers. But what exactly do these claims mean and how might they be verified? In this important methodological study Alistair S. Duff cuts through the rhetoric to get to the bottom of the information society thesis. Wide ranging in coverage this study will be of interest to scholars in information science, communication and media studies and social theory. It is a key text for the newly unified specialism of information society studies and an indispensable guide to the future of this discipline.

Frontiers Of Illusion Daniel Sarewitz, 2010-06-10 An incisive argument for fostering stronger links between the interests of society and progress in science. **A New Deal for an Effective European Research Policy** Ugur Muldur, Fabienne Corvers, Henri Delanghe, Jim Dratwa, Daniela Heimberger, Brian Sloan, Sandrijn Vanslebrouck, 2007-05-06 More than a century ago Louis Pasteur observed that Science knows no country because knowledge belongs to humanity and is the torch which illuminates the world. His remark has all the more resonance today with the increasing globalization of science, technology and commerce. But it also underlines an important truth that science has always advanced most rapidly when it is a collective endeavour with a strong circulation of knowledge. When it comes to forging cooperation in research, Europe has an impressive track record. This year the European Union's Framework Programme for Research and Technological Development celebrates its 20th birthday. It is the world's largest programme in support of transnational research promoting cooperation, coordination and mobility across borders. The year 2007 will see the launch of the 7th Framework Programme, the biggest and most ambitious so far. This book will show how the new Framework Programme was put together and explain why it took the shape it did. It will also set out its potential impacts and the conditions necessary for it to be a success. In the challenging new global economy, knowledge is Europe's most valuable resource and I am convinced that with its unprecedented scale and scope the 7th Framework Programme is the right strategy for a Europe that wants to progress.

towards a knowledge based economy However the Framework Programme is only a very modest part of total public R D spending in Europe the bulk of which is carried out by national governments
