What is it like to do field biology in a world that exalts experiments and laboratories How have field biologists assimilated laboratory values and practices and crafted an exact quantitative science without losing their naturalist souls In *Landscapes and Labscapes* Robert E Kohler explores the people places and practices of field biology in the United States from the 1890s to the 1950s He takes readers into the fields and forests where field biologists learned to count and measure nature and to read the imperfect records of nature s experiments He shows how field researchers use nature s particularities to develop practices of place that achieve in nature what laboratory researchers can only do with simplified experiments Using historical frontiers as models Kohler shows how biologists created vigorous new border sciences of ecology and evolutionary biology **Trust Me, I'm a Scientist** Pervez Hoodbhoy,Daniel Glaser,Steven Shapin,2004 Why should we trust scientists

**Human Embryo Research Debates** Ronald M. Green,2001-06-28 Research on the early human embryo has long been recognized as essential to progress in a host of biomedical areas from reproductive medicine to the treatment of pediatric cancers Now with the possibility of stem cell research and cell replacement therapies embryo research holds out the promise of cures for many serious disease conditions such as diabetes and Alzheimer s disease Despite its importance however human embryo research has met powerful opposition Drawing on his experience as a member of the NIH s Human Embryo Research Panel Green offers a first hand account of the embryo research debates In telling this story he periodically pauses to reflect on some of the leading philosophical challenges posed by embryo research and new interventions at the start of life Among the questions he examines are What is the impact of new biological information on our thinking about life s beginning May parents risk injuring a child in order to have it What role should religion play in shaping biomedical policy in a controversial

**Lesser Harms** Sydney A. Halpern, 2006-08-01 Research physicians face intractable dilemmas when they consider introducing new medical procedures Innovations carry the promise of preventing or curing life threatening diseases but they can also lead to injury or even death How have clinical scientists made high stakes decisions about undertaking human tests of new medical treatments In *Lesser Harms* Sydney Halpern explores this issue as she examines vaccine trials in America during the early and mid twentieth century Today's scientists follow federal guidelines for research on human subjects developed during the 1960s and 1970s But long before these government regulations medical investigators observed informal rules when conducting human research They insisted that the dangers of natural disease should outweigh the risks of a medical intervention and they struggled to accurately assess the relative hazards Halpern explores this logic of risk in immunization controversies extending as far back as the eighteenth century Then focusing on the period between 1930 and 1960 she shows how research physicians and their sponsors debated the moral quandaries involved in moving vaccine use from the laboratory to the clinic This probing work vividly describes the efforts of clinical investigators to balance the benefits and dangers of untested vaccines to respond to popular sentiment about medical hazards and to strategically present risk laden research to sponsors and the public Concise and extremely well written A fascinating synthesis of sociology history and institutional theory Samuel C Blackman *Journal of the American Medical Association*
