Huebner,2014-10-10 George Herbert Mead is a foundational figure in sociology best known for his book Mind Self and Society which was put together after his death from course notes taken by stenographers and students and from unpublished manuscripts Mead however never taught a course primarily housed in a sociology department and he wrote about a wide variety of topics far outside of the concerns for which he is predominantly remembered including experimental and comparative psychology the

history of science and relativity theory In short he is known in a discipline in which he did not teach for a book he did not write In *Becoming Mead* Daniel R Huebner traces the ways in which knowledge has been produced by and about the famed American philosopher Instead of treating Mead s problematic reputation as a separate topic of study from his intellectual biography Huebner considers both biography and reputation as social processes of knowledge production He uses Mead as a case study and provides fresh new answers to critical questions in the social sciences such as how authors come to be considered canonical in particular disciplines how academics understand and use others works in their research and how claims to authority and knowledge are made in scholarship *Becoming Mead* provides a novel take on the history of sociology placing it in critical dialogue with cultural sociology and the sociology of knowledge and intellectuals [A Purdue Icon](#)

of Hoover Dam one of the country's most recognizable and far reaching landmarks and its lasting political and environmental effects on the Colorado River and the American West. At the time of its completion in 1936 Hoover Dam was the biggest dam in the world and the largest feat of architecture and engineering in the country, a statement of national ambition and technical achievement. It turned the wild Colorado River into a tame and securely managed water source, transforming millions of acres of desert into farmland while also providing water and power to the fast growing population of the Southwest. The concrete monolith quickly became a symbol of American ingenuity, however its history is laden with contradiction. It provided work for thousands but it was a dangerous project that exploited desperate workers during the Depression. It helped secure the settlement and economies of the Southwest but at the expense of Indigenous peoples and the environment and it created a dependency on the Colorado River's water which is under threat from overuse and climate change. Weaving together elements of engineering, geography and political and socioeconomic history and drawing heavily from unpublished oral histories taken from dam workers and their families, Simon Boughton's thoughtful and compelling debut featuring historical photographs throughout follows the construction and impact of Hoover Dam and how its promise of abundance ultimately created a river in crisis today.
