Special Functions Kz Type Equations And Representation Theory:

Special Functions, KZ Type Equations, and Representation Theory Aleksandr Nikolaevich Varchenko, Special Functions, KZ Type Equations, and Representation Theory Aleksandr Nikolaevich Varchenko, 2003 The last twenty years have seen an active interaction between mathematics and physics This book is devoted to one of the new areas which deals with mathematical structures related to conformal field theory and its sqs deformations In the book the author discusses the interplay between Knizhnik Zamolodchikov type equations the Bethe ansatz method representation theory and geometry of multi dimensional hypergeometric functions This book aims to provide an introduction to the area and expose different facets of the subject It contains constructions discussions of notions statements of main results and illustrative examples The exposition is restricted to the simplest case of the theory associated with the Lie algebra $\mathfrak{sl}(2)$ This book is intended for researchers and graduate students in mathematics and in mathematical physics in particular to those interested in applications of special functions

Special Functions Richard Beals, Roderick Wong, 2010-08-12 The subject of special functions is often presented as a collection of disparate results which are rarely organised in a coherent way This book answers the need for a different approach to the subject The authors main goals are to emphasise general unifying principles coherently and to provide clear motivation efficient proofs and original references for all of the principal results The book covers standard material but also much more including chapters on discrete orthogonal polynomials and elliptic functions The authors show how a very large part of the subject traces back to two equations the hypergeometric equation and the confluent hypergeometric equation and describe the various ways in which these equations are canonical and special Providing ready access to theory and formulas this book serves as an ideal graduate level textbook as well as a convenient reference

Special Functions and Orthogonal Polynomials Richard Beals, Roderick Wong, 2016-05-17 The subject of special functions is often presented as a collection of disparate results rarely organized in a coherent way This book emphasizes general principles that unify and demarcate the subjects of study The authors main goals are to provide clear motivation efficient proofs and original references for all of the principal results The book covers standard material but also much more It shows how much of the subject can be traced back to two equations the hypergeometric equation and confluent hypergeometric equation and it details the ways in which these equations are canonical and special There is extended coverage of orthogonal polynomials including connections to approximation theory continued fractions and the moment problem as well as an introduction to new asymptotic methods There are also chapters on Meijer G functions and elliptic functions The final chapter introduces Painlevé transcendents which have been termed the special functions of the twenty first century

Encyclopedia of Special Functions: The Askey-Bateman Project: Volume 2, Multivariable Special Functions Tom H. Koornwinder, Jasper V. Stokman, 2020-10-15 This is the second of three volumes that form the Encyclopedia of Special Functions an extensive update of the Bateman Manuscript Project Volume 2 covers multivariable special functions

When the Bateman project appeared study of these was in an early stage but revolutionary developments began to be made in the 1980s and have continued ever since World renowned experts survey these over the course of 12 chapters each containing an extensive bibliography The reader encounters different perspectives on a wide range of topics from Dunkl theory to Macdonald theory to the various deep generalizations of classical hypergeometric functions to the several variables case including the elliptic level Particular attention is paid to the close relation of the subject with Lie theory geometry mathematical physics and combinatorics

Low Dimensional Topology and Number Theory Masanori Morishita, Hiroaki Nakamura, Jun Ueki, 2025-03-02 This book is the result of research initiatives formed during the workshop Low Dimensional Topology and Number Theory XIII at Kyushu University in 2022 It is also dedicated to the memory of Professor Toshie Takata who has been a main figure of the session chairs for the series of annual workshops since 2009 The activity was aimed at understanding and deepening recent developments of lively and fruitful interactions between low dimensional topology and number theory over the past decades In this volume of proceedings the reader will find research papers as well as survey articles including open problems at the interface between classical and quantum topology and algebraic and analytic number theory written by leading experts and active researchers in the respective fields Topics include among others the strong slope conjecture Kashiwara Vergne Lie algebra braids and fibered double branched covers of 3 manifolds Temperley Lieb Jones category and conformal blocks WRT invariants and false theta functions the colored Jones polynomial of the figure eight knot potential functions and A polynomials l adic Galois polylogarithms Dijkgraaf Witten invariants in Bloch groups analogies between knots and primes in arithmetic topology normalized Jones polynomials for rational links Iwasawa main conjecture Weber's class number problem The book provides a valuable resource for researchers and graduate students interested in topics related to both low dimensional topology and number theory

Bridging Algebra, Geometry, and Topology Denis Ibadula, Willem Veys, 2014-10-20 Algebra geometry and topology cover a variety of different but intimately related research fields in modern mathematics This book focuses on specific aspects of this interaction The present volume contains refereed papers which were presented at the International Conference Experimental and Theoretical Methods in Algebra Geometry and Topology held in Eforie Nord near Constanta Romania during 20-25 June 2013 The conference was devoted to the 60th anniversary of the distinguished Romanian mathematicians Alexandru Dimca and tefan Papadima The selected papers consist of original research work and a survey paper They are intended for a large audience including researchers and graduate students interested in algebraic geometry combinatorics topology hyperplane arrangements and commutative algebra The papers are written by well known experts from different fields of mathematics affiliated to universities from all over the world they cover a broad range of topics and explore the research frontiers of a wide variety of contemporary problems of modern mathematics

Zeta and L -functions in Number Theory and Combinatorics Wen-Ching Winnie Li, 2019-03-01 Zeta and L functions play a central role in number theory They provide important information of arithmetic nature This book

which grew out of the author's teaching over several years explores the interaction between number theory and combinatorics using zeta and L functions as a central theme. It provides a systematic and comprehensive account of these functions in a combinatorial setting and establishes among other things the combinatorial counterparts of celebrated results in number theory such as the prime number theorem and the Chebotarev density theorem. The spectral theory for finite graphs and higher dimensional complexes is studied. Of special interest in theory and applications are the spectrally extremal objects called Ramanujan graphs and Ramanujan complexes which can be characterized by their associated zeta functions satisfying the Riemann Hypothesis. Explicit constructions of these extremal combinatorial objects using number theoretic and combinatorial means are presented. Research on zeta and L functions for complexes other than graphs emerged only in recent years. This is the first book for graduate students and researchers offering deep insight into this fascinating and fast developing area.

Hypergeometry, Integrability and Lie Theory Erik Koelink, Stefan Kolb, Nicolai Reshetikhin, Bart Vlaar, 2022-08-30 This volume contains the proceedings of the virtual conference on Hypergeometry Integrability and Lie Theory held from December 7-11 2020 which was dedicated to the 50th birthday of Jasper Stokman. The papers represent recent developments in the areas of representation theory quantum integrable systems and special functions of hypergeometric type.

Fitting Smooth Functions to Data Charles Fefferman, Arie Israel, 2020-10-27 This book is an introductory text that charts the recent developments in the area of Whitney type extension problems and the mathematical aspects of interpolation of data. It provides a detailed tour of a new and active area of mathematical research. In each section the authors focus on a different key insight in the theory. The book motivates the more technical aspects of the theory through a set of illustrative examples. The results include the solution of Whitney's problem an efficient algorithm for a finite version and analogues for Hölder and Sobolev spaces in place of C_m . The target audience consists of graduate students and junior faculty in mathematics and computer science who are familiar with point set topology as well as measure and integration theory. The book is based on lectures presented at the CBMS regional workshop held at the University of Texas at Austin in the summer of 2019.
