Speciation In Wrens Of The Genus Campylorhynchus:

Speciation in Wrens of the Genus Campylorhynchus Robert K. Selander, 1964 **Speciation in Wrens of the Genus Campylorhynchus** R. K. Selander, 1964 **Speciation in Wrens of the Genus Campylorhynchus** Robert Keith Selander, 1956 Handbook of Avian Hybrids of the World Eugene M. McCarthy, 2006-02-16 With more than 5 000 works cited Handbook of Avian Hybrids of the World is the greatest compendium of information ever published on hybridization in birds Worldwide in scope it provides information on all reported avian crosses not only those occurring in captivity but also in a natural setting approximately 4 000 crosses are covered This book is a basic reference intended both for the serious birder and the professional biologist McCarthy s work fills a need for reference material that takes into account the last half century of data It will be of interest to workers in a wide variety of fields ranging from animal behavior to genetics ecology zoology and systematics In fact it will make fascinating reading for anyone interested in birds and the natural world

Current Ornithology Richard Johnston, 2012-12-06 If it is still true that more than 80% of the ornithologists in North America are primarily interested or engaged in ecological studies on birds J R King and W J Bock Final Report of the Workshop on a National Plan For Ornithology 1978 then Volume 3 of Current Ornithology is preadapted for their consideration All but one article in this volume are somehow concerned with the ecological aspects of the biology of birds Variation in the scope of topical coverage is relatively broad and includes conservation reproduction behavior community structure and evolutionary ecology Three reviews concern the pervasive effects of man and industry on various bird populations of the world Risebrough provides a detailed description of the relationships between pesticides and bird populations Morrison assesses aspects of bird population numbers as indicators of environmental change and Temple outlines current research on endangered species The broad spectrum of reproductive ecology of birds is variously treated in this volume Jehl and Murray explore sexual selection and some of the resulting complexities in the evolution of sexual size dimorphism primarily in shorebirds Lawton and Lawton are concerned with the relationships between social behavior and breeding systems in which variation is found in the age at which reproduction is first undertaken Oring examines the wide ranging variation in polyandrous breeding systems in birds while Rohwer is concerned with adoption versus infanticide in birds and their relationships to reproductive fitness *Wrens, Dippers and Thrashers* David Brewer, 2010-08-30 This is the first comprehensive guide to these closely related families The book covers all 75 wrens 34 thrashers and 5 dippers almost all of which are New World species The wrens Troglodytidae in particular display great diversity occupying almost every kind of habitat in the Americas The family probably originates in Central America where the greatest number of species is to be found The thrashers Mimidae include the mockingbirds catbirds and tremblers The dippers Cinclidae are river specialists although unusually they exhibit no obvious features for an aquatic existence *Speciation in Birds* Trevor Price, 2008 In *Speciation in Birds* Trevor Price a University of Chicago professor and leading expert in the field has written the most

authoritative and modern synthesis on the subject to date In clear and engaging prose and through beautiful illustrations Price shows us why the field is as exciting and vibrant as ever He evaluates the roles of natural selection and sexual selection He asks how speciation contributes to some of the great patterns in species diversity such as the large number of species in the tropics and the many endemic species on isolated islands Throughout the book Price emphasizes the integration of behavior ecology and genetics

Cooperative Breeding in Birds Peter B. Stacey, Walter D. Koenig, 1990-04-19 Cooperative breeding is an unusual kind of social behaviour found in a few hundred species worldwide in which individuals other than the parents help raise young Understanding the apparently altruistic behaviour of helpers has provided numerous challenges to evolutionary biologists This book includes detailed first hand summaries of many of the major empirical studies of cooperatively breeding birds It provides comparative information on the demography social behaviour and behavioural ecology of these unusual species and explores the diversity of ideas and the controversies which have developed in this field The studies are all long term and consequently the book summarises some of the most extensive studies of the behaviour of marked individuals ever undertaken Graduate students and research workers in ornithology sociobiology behavioural ecology and evolutionary biology will find much of value in this book

Character Variation and Evolution of Sibling Species in the Empidonax Difficilis-flavescens Complex (Aves, Tyrannidae) Ned K. Johnson, 1980-01-01 *Evolutionary Differentiation in Morphology, Vocalizations, and Allozymes Among Nomadic Sibling Species in the North American Red Crossbill (Loxia Curvirostra) Complex* Jeffrey G. Groth, 1993-08-16 The highly variable North American red crossbill complex has presented one of the most controversial problems in avian systematics Although crossbills wander nomadically and breed all year they have not become homogenized in bill and body size This study suggests that this crossbill complex contains several distinctive sibling species that breed sympatrically and show ecological differences
