Spectral Sequence Constructors In Algebr:

Spectral Sequence Constructors in Algebra and Topology Donald W. Barnes, 1985 In this monograph the theory of spectral sequence constructors is developed the four main constructions of the spectral sequence of a Hopf algebra extension are discussed and compared and a uniqueness theorem for the spectral sequence is proved A similar study is made of the spectral sequence of a fibration and its uniqueness is also established *A User's Guide to Spectral Sequences* John McCleary, 2001 Spectral sequences are among the most elegant and powerful methods of computation in mathematics This book describes some of the most important examples of spectral sequences and some of their most spectacular applications The first part treats the algebraic foundations for this sort of homological algebra starting from informal calculations The heart of the text is an exposition of the classical examples from homotopy theory with chapters on the Leray Serre spectral sequence the Eilenberg Moore spectral sequence the Adams spectral sequence and in this new edition the Bockstein spectral sequence The last part of the book treats applications throughout mathematics including the theory of knots and links algebraic geometry differential geometry and algebra This is an excellent reference for students and researchers in geometry topology and algebra [Algebraic Methods in Unstable Homotopy Theory](#) Joseph Neisendorfer, 2010-02-18 The most modern and thorough treatment of unstable homotopy theory available The focus is on those methods from algebraic topology which are needed in the presentation of results proven by Cohen Moore and the author on the exponents of homotopy groups The author introduces various aspects of unstable homotopy theory including homotopy groups with coefficients localization and completion the Hopf invariants of Hilton James and Toda Samelson products homotopy Bockstein spectral sequences graded Lie algebras differential homological algebra and the exponent theorems concerning the homotopy groups of spheres and Moore spaces This book is suitable for a course in unstable homotopy theory following a first course in homotopy theory It is also a valuable reference for both experts and graduate students wishing to enter the field **Rings, Modules, and Algebras in Stable Homotopy Theory** Anthony D. Elmendorf, 1997 This book introduces a new point set level approach to stable homotopy theory that has already had many applications and promises to have a lasting impact on the subject Given the sphere spectrum S the authors construct an associative commutative and unital smash product in a complete and cocomplete category of S modules whose derived category is equivalent to the classical stable homotopy category This construction allows for a simple and algebraically manageable definition of S algebras and commutative S algebras in terms of associative or associative and commutative products $R \wedge SR \longrightarrow R$ These notions are essentially equivalent to the earlier notions of A ∞ and E ∞ ring spectra and the older notions feed naturally into the new framework to provide plentiful examples There is an equally simple definition of R modules in terms of maps $R \wedge SM \longrightarrow M$ When R is commutative the category of R modules also has a *Lectures On Algebraic Topology* Haynes R Miller, 2021-09-20 Algebraic Topology and basic homotopy theory form a fundamental building block for

much of modern mathematics These lecture notes represent a culmination of many years of leading a two semester course in this subject at MIT The style is engaging and student friendly but precise Every lecture is accompanied by exercises It begins slowly in order to gather up students with a variety of backgrounds but gains pace as the course progresses and by the end the student has a command of all the basic techniques of classical homotopy theory

Homotopy Invariant Algebraic Structures Jean-Pierre Meyer, 1999 This volume presents the proceedings of the conference held in honor of J Michael Boardman's 60th birthday It brings into print his classic work on conditionally convergent spectral sequences Over the past 30 years it has become evident that some of the deepest questions in algebra are best understood against the background of homotopy theory Boardman and Vogt's theory of homotopy theoretic algebraic structures and the theory of spectra for example were two benchmark breakthroughs underlying the development of algebraic K theory and the recent advances in the theory of motives The volume begins with short notes by Mac Lane May Stasheff and others on the early and recent history of the subject But the bulk of the volume consists of research papers on topics that have been strongly influenced by Boardman's work Articles give readers a vivid sense of the current state of the theory of homotopy invariant algebraic structures Also included are two major foundational papers by Goerss and Strickland on applications of methods of algebraic K theory to problems of topology Boardman is known for the depth and wit of his ideas This volume is intended to reflect and to celebrate those fine characteristics

Algebraic Geometry H. Kurke, J.H.M. Steenbrink, 2012-12-06 The Conference on Algebraic Geometry held in Berlin 9-15 March 1988 was organised by the Sektion Mathematik of the Humboldt Universität The organising committee consisted of H Kurke W Kleinert G Pfister and M Roczen The Conference is one in a series organised by the Humboldt Universität at regular intervals of two or three years with the purpose of providing a meeting place for mathematicians from eastern and western countries The present volume contains elaborations of part of the lectures presented at the Conference and some articles on related subjects All papers were subject to the regular refereeing procedure of *Compositio Mathematica* and H Kurke acted as a guest editor of this journal The papers focus on actual themes in algebraic geometry and singularity theory such as vector bundles arithmetical algebraic geometry intersection theory moduli and Hodge theory We are grateful to all those who by their hospitality their presence at the Conference their support or their written contributions have made this Conference a success The editors *Compositio Mathematica* 76 viii 1990

Homotopy Methods in Algebraic Topology Nicholas Kuhn, 2001-04-25 This volume presents the proceedings from the AMS IMS SIAM Summer Research Conference on Homotopy Methods in Algebraic Topology held at the University of Colorado Boulder The conference coincided with the sixtieth birthday of J Peter May An article is included reflecting his wide ranging and influential contributions to the subject area Other articles in the book discuss the ordinary elliptic and real oriented Adams spectral sequences mapping class groups configuration spaces extended powers operads the telescope conjecture p compact groups algebraic K theory stable and unstable splittings the calculus of functors the E_∞

tensor product and equivariant cohomology theories The book offers a compendious source on modern aspects of homotopy theoretic methods in many algebraic settings **Complex Cobordism and Stable Homotopy Groups of Spheres** Douglas C. Ravenel, 2023-02-09 Since the publication of its first edition this book has served as one of the few available on the classical Adams spectral sequence and is the best account on the Adams Novikov spectral sequence This new edition has been updated in many places especially the final chapter which has been completely rewritten with an eye toward future research in the field It remains the definitive reference on the stable homotopy groups of spheres The first three chapters introduce the homotopy groups of spheres and take the reader from the classical results in the field though the computational aspects of the classical Adams spectral sequence and its modifications which are the main tools topologists have to investigate the homotopy groups of spheres Nowadays the most efficient tools are the Brown Peterson theory the Adams Novikov spectral sequence and the chromatic spectral sequence a device for analyzing the global structure of the stable homotopy groups of spheres and relating them to the cohomology of the Morava stabilizer groups These topics are described in detail in Chapters 4 to 6 The revamped Chapter 7 is the computational payoff of the book yielding a lot of information about the stable homotopy group of spheres Appendices follow giving self contained accounts of the theory of formal group laws and the homological algebra associated with Hopf algebras and Hopf algebroids The book is intended for anyone wishing to study computational stable homotopy theory It is accessible to graduate students with a knowledge of algebraic topology and recommended to anyone wishing to venture into the frontiers of the subject **H-Spaces from a Homotopy Point of View** James Stasheff, 2006-11-15
