Spectroscopy, Luminescence and Radiation Centers in Minerals A.S. Marfunin,2012-12-06 The development of mineralogy the evolutionary changes in comprehending the mineral substance of the earth are closely associated with the progress of research methods Over a space of more than two and half centuries from the goniometry of the mineral crystals to microscopic petrography and optical mineralogy to crystal structure determinations electron microscopy and electron diffraction and finally investigations into their electrical magnetic and mechanical properties all this has led to the formation of the existing system of mineralogy its notions theories and to a proper description of minerals However no matter how great the variety of methods employed in mineralogy they all come to a few aspects of substance characteristics These are methods of determining the composition structure and proper ties of the minerals Thus the X ray micro analyzer the atom absorption neutron activation chromatographic and other analyses open up new opportunities for determining nothing else but the elementary composition of minerals
