

Two Aging Processes

Biological Vs. Environmental Aging

Only 10% of skin aging is due to the body's natural aging process

The remaining 90% is caused by external factors like pollution, blue light and UV rays

Skin And Aging Processes:

Skin and Aging Processes Barbara A. Gilchrest, 1984-02-10 This text deals comprehensively with the aging processes of the skin. It organizes the disciplines of dermatologic gerontology and geriatrics and critically examines their current content with an eye to future needs. All aspects of the aging processes in the skin are considered: psychosocial effects, medical and financial impacts of skin disease, documented use of the skin as a model system for gerontologic studies, and general theories of aging. Age-associated changes in normal human skin are defined, and previously published studies on this subject are critically reviewed. For each skin disorder, diagnostic criteria, clinical and histologic features, and therapeutic options are reviewed in light of possible pathogenic mechanisms and their relationship to the aging process. Molecular Mechanisms of the Aging Process and Rejuvenation Naofumi Shiomi, 2016-08-31 Numerous studies had been performed to elucidate the mechanisms of aging and to achieve rejuvenation with some success reported in recent years. However, at present the findings from those studies are not sufficient to resolve the issue of aging. This book presents an overview of recent topics on cellular aging and rejuvenation. In the early chapters, the molecular mechanisms of aging via the activities of clock and ion channel proteins, in addition to overall aspects, are discussed. In the latter part, the aging of the skin, immune system, and brain is discussed. This book will prove useful for those studying or developing new drugs to counter the aging process and will encourage the development of novel ideas for rejuvenation.

Textbook of Aging Skin Miranda A. Farage, Kenneth W. Miller, Howard I. Maibach, 2009-12-02 This comprehensive Major Reference Book compiles all current and latest information on aging skin in a two-volume set. Highly structured with a reader-friendly format, it covers a wide range of areas such as basic sciences, the different diseases and conditions which occur with aging, from malignant to non-malignant, the latest techniques and methods being used, such as bioengineering methods and biometrics, as well as toxicological and safety considerations for the elderly population. It also illustrates the global consumer's sociological and psychological implications, ethnicity, and gender differences and includes marketing considerations for this elderly group. This unique and comprehensive guide will become the main reference textbook on this topic.
