**pH of the Skin: Issues and Challenges** Christian Surber, Christoph Abels, Howard Maibach, 2018-08-21 The concept of expressing acidity as the negative logarithm of the hydrogen ion concentration was defined and termed pH in the beginning of the 20th century The general usefulness of the pH concept for life science was recognized and later gained importance to analytical research Reports on results of pH measurements from living skin established the term acid mantle the skin's own protective shield that maintains a naturally acid pH It is invisible to the eye but crucial to the overall wellbeing of skin Chronic alkalization can throw this acid mantle out of balance leading to inflammation dermatitis and atopic skin diseases It is therefore no surprise that skin pH shifts have been observed in various skin pathologies It is also obvious that the pH in topically applied preparations may play an important role Optimal pH and buffer capacity within topical preparations not only support stability of active ingredients and auxiliary materials but may also increase absorption of the non ionized species of an acidic or a basic active ingredient They may even open up opportunities to modify and correct skin pH and hence accelerate barrier recovery and maintain or enhance barrier integrity Further efforts are needed to standardize and improve pH measurements in biological media or pharmaceutical cosmetic vehicles to increase and ensure quality comparability and relevance of research data In this volume we present a unique collection of papers that address past present and future issues of the pH of healthy and diseased skin It is hoped that this collection will foster future efforts in clinical and experimental skin research
