Álvarez, 2003-08-03 The two volume set LNCS 2686 and LNCS 2687 constitute the refereed proceedings of the 7th International Work Conference on Artificial and Natural Neural Networks IWANN 2003 held in Ma 3 Menorca Spain in June 2003 The 197 revised papers presented were carefully reviewed and selected for inclusion in the book and address the following topics mathematical and computational methods in neural modelling neurophysiological data analysis and modelling structural and functional models of neurons learning and other plasticity phenomena complex systems dynamics cognitive processes and artificial intelligence methodologies for net design bio inspired systems and engineering and applications in a broad variety of fields      **Sensor-Based Sleep Stage Classification Using Deep Learning** Xinyu Huang , 2023-02-23 Sleep is a cyclic physiological phenomenon an important aspect of human life activity which like sport and diet is a nutritional element that ensures the growth and development of the organism Under the influence of various factors such as work and study stress and metabolic disorders more and more people suffer from various types of sleep disorders Sleep has become an important research topic in recent years Sleep stage analysis plays an important role in the early detection and treatment of sleep disorders However different age groups show different symptoms of sleep disorders and different sleep disorders show variability in their different sleep stages The prevalence of sleep disorders is much higher in children than in adults Although the classification of sleep stages in adults has been well studied children show markedly different characteristics of sleep stages Therefore there is an urgent need for sleep stage classification in children With the rapid development of intelligent computing technology artificial intelligence has found wide application in medical research and health sciences in recent years In the field of sleep medicine deep learning approaches can efficiently and automatically learn abstracted relevant sleep features from collected sleep data to accurately interpret children s sleep stages accordingly Compared to traditional sleep data analysis this saves many manual and time resources for data annotation and helps sleep experts reduce the risk of misdiagnosing sleep disorders based on their prior knowledge In this context this book presents several advanced deep learning based approaches for sleep stage classification in children using time series polysomnography recordings acquired from clinical sensor devices Significantly improved

performance in classifying sleep stages in children suffering from sleep disorders demonstrates the great potential of joint research and development between artificial intelligence and the field of sleep medicine     *Rest Assured* Louise
