**Counseling Psychology** Jay C. Thomas, Michel Hersen, 2003-02-26 Understanding Research in Clinical and Counseling Psychology is a unique text because it is designed and written for the graduate students aspiring to careers in practice rather than in psychological science who are the vast majority in clinical and counseling programs To motivate readers to see the value of knowledge produced by research the book opens with an actual case report that shows how research generated strategies incorporated into treatment allowed a woman who formerly would have been considered so hopelessly incapacitated by obsessive compulsive disorder as to require lifetime institutionalization if not neurosurgery to return to normal family and work life The first set of chapters introduces fundamental concepts of measurement sampling and validity The next set systematically presents the kinds of investigations most relevant to budding practitioners group comparisons correlations single subject designs program evaluations and meta analyses Each of these chapters concludes with a detailed example of a study in which students can see how the techniques described are actually employed The third set addresses enduring concerns how to define and maintain ethical standards how to do effective literature reviews and assess the quality of existing data and how to collect and analyze data It also addresses concerns that have emerged recently how to distinguish and judge effective and efficacious treatments and how to contribute to research efforts as a private practitioner The issues involved in the often confusing effectiveness versus efficacy debate are illuminated with a clinically relevant case example Descriptions of alternatives to conventional significance testing such as clinical significance and reliable change analyses help students consider new ways in which they can impose rigor on their own research and practice activities Two final chapters examine the challenges of studying two special groups children and older adults Throughout the authors all capable

researchers who are also experienced practitioners demonstrate the ways in which research is an essential foundation for effective and ethical practice. Students and instructors alike will welcome this reader friendly book *Depression* Douglas McCann, Norman S. Endler, 1990 **Social Processes in Clinical and Counseling Psychology** James E. Maddux, Cal Stoltzenberg, Robert Rosenwein, 1987-10-05 Even as psychology becomes increasingly splintered and specialized as evidenced by the growing number of special interest divisions of the American Psychological Association many psychologists are devoting their energies to finding commonalities between traditionally distinct fields and building bridges between them. Developmental psychopathology for example has emerged as a synthesis of child development theory and clinical child psychology. Health psychology has resulted from the cooperation and collaboration of many psychologists from a number of fields including clinical counseling social developmental and physiological. Within clinical psychology is a growing movement toward rapprochement that is dedicated to finding common themes among seemingly disparate approaches to psychotherapy. Thus integration among different fields has increased even as diversity in psychology has flourished. One such integration or interfacing effort that is related in several ways to the integrative efforts just noted involves social clinical and counseling psychology. Although this effort is not a new one see chapter 1 it was given a new lease on life by the publication of the first issue of the *Journal of Social and Clinical Psychology* in 1983. Since that time several volumes and numerous journal articles and book chapters have been devoted to the general notion that social psychological theory and research has much to offer clinical and counseling psychology such as greater understanding of psychological and everyday problems in living and insight into clinical and counseling activities such as psychotherapy. **Advances in Cognitive—Behavioral Research and Therapy** Philip C. Kendall, 2013-09-24 *Advances in Cognitive Behavioral Research and Therapy* Volume 4 comprises a diversity of advances in cognitive behavioral research and practice. This book discusses the origin of memories predicting depression and attributional bias in aggressive children. The context goodness of fit model of adjustment role of cognition in behavioral medicine elaboration likelihood model of persuasion and personal constructs in clinical practice are also deliberated in this text. This publication is valuable to researchers and clinicians concerned with cognition and behavior.

The Psychology of Secrets Anita E. Kelly, 2012-12-06 On an MTV special aired in 2000 young interviewees were asked to confess the worst thing they were ever told during a romantic breakup. One person tearfully responded that I suck in bed. More recently an acquaintance of mine admitted to his new girlfriend that he has a mean streak. She decided not to date him after that. Another memorable and painful example of openness occurred years ago when I served as a member of a suicide intervention team. I was called to a very disturbing scene in an upscale neighborhood to console a woman who was threatening to take her life on the lawn in front of her children. Her husband had just confessed his long term affair to her that morning and she felt that her world was coming apart. Fortunately she did not take her life but was left with the humiliation of having her neighbors know about her private troubles. The question these examples bring to mind is Why do people so

often reveal potentially stigmatizing personal information to others The reader probably has an intuitive answer to this question already It can seem like such a burden even torture to keep secrets from other people Hiding such things as feelings of discontent from a boyfriend or girlfriend violations of the law from close friends and indiscretions from employers can be alienating People want others to know them therefore they often end up disclosing self incriminating information
